800 Howard Avenue
New Haven, Connecticut 06519

Office Hours: Monday through Friday 8:30 AM – 5 PM

We do more than provide the latest advances—we discover them.

---

Some women with incontinence and/or prolapse have not sought medical treatment for a number of reasons—because they were embarrassed, feared that their condition was caused by serious medical issues, were afraid they might need surgery, or erroneously believed their incontinence or prolapse is a normal condition of aging.

Incontinence and prolapse are infrequently caused by serious medical conditions. However, these conditions are also not normal, regardless of age or health. They can devastate a woman psychologically as well as socially, emotionally, and physically. Fortunately, there are treatments available that can cure incontinence and prolapse, and restore a woman’s quality of life.

Treatment for incontinence and prolapse can be non-surgical and surgical. Physicians at Yale Urogynecology and Reconstructive Pelvic Surgery base their treatments on each woman’s individual preference. Some women prefer non-surgical therapy; others request surgery; a few only want the reassurance that their incontinence or prolapse is not caused by serious medical conditions. We make sure that each woman is fully aware of all the available treatment options and help her choose a treatment plan that matches her comfort level and lifestyle. Any woman whose daily activities and quality of life are being affected by incontinence or prolapse should talk to her healthcare provider about available treatment options.

---

**OUR CENTER SPECIALIZES IN EVALUATION, NON-SURGICAL AND SURGICAL TREATMENT FOR WOMEN WITH:**

- Urinary incontinence (accidental loss of urine)
- Bowel incontinence (accidental loss of stool)
- Pelvic organ prolapse (uterus, vagina, bladder or rectum that have dropped from their normal position)
- Interstitial cystitis (bladder wall inflammation)
- Sexual dysfunction resulting from incontinence and prolapse

Many people think incontinence and pelvic organ prolapse are uncommon problems that affect only a small number of elderly or disabled women. In contrast, our data has revealed that approximately 35 percent of women who visit their gynecologist’s office for routine care have urinary incontinence and 40 percent have moderate to severe pelvic organ prolapse. In addition, 13 percent of postmenopausal women have bowel incontinence.
1. Do you accidentally leak urine when you cough, sneeze, run, jump, lift something heavy, or perform any kind of strenuous activity?

2. Do you often have such a strong urge to void that you leak urine before you can reach a bathroom?

3. Do you have to physically adjust a protrusion in the vaginal area to void or to have a bowel movement?

4. Do you often have such a strong urge to have a bowel movement that you pass some stool once per week?

5. Do you have to void more than once every hour during the day or more than three times at night?

6. Do you have to void more than once every hour? The examination is very similar to a routine gynecologic exam. There will be ample time to thoroughly discuss your condition and treatment options. Please feel free to have someone accompany you to our office.

7. Do you have to physically adjust a protrusion in the vaginal area to void or to have a bowel movement?

8. Do you have pelvic pressure or heaviness in the vaginal area that disappears when you lie down?

If you answered yes to any of these questions, speak with your healthcare provider or call Yale Urogynecology and Reconstructive Pelvic Surgery to schedule an appointment with one of our specialists.

**DETERMINING YOUR SYMPTOMS**

**EVALUATION AND TREATMENT PROCESS**

Our goals are to help you understand your condition, ensure that you are fully aware of the available treatment options, and help you select a treatment that matches your comfort level to improve your quality of life.

- An initial visit lasting approximately one hour. The examination is very similar to a routine gynecologic exam. There will be ample time to thoroughly discuss your condition and treatment options. Please feel free to have someone accompany you to our office.

- Consultation with one of our highly trained and experienced physicians who specializes in treating women with urinary and fecal incontinence and pelvic organ prolapse.

- Appropriate diagnostic tests with our state-of-the-art equipment.

- Continued open communication with your referring physicians throughout your evaluation and treatment.

- Partnering with you to develop a treatment plan that considers your goals and expectations.

**TREATMENT PROCESS**

- Dr. Bercik obtained his medical degree from UMDNJ-New Jersey Medical School and completed his Obstetrics and Gynecology residency at New York University-Bellevue Medical Center in New York City. He was the Director of Gynecology and Chief of Service of OB/GYN at Bellevue and Co-Director of the Urogynecology/Pelvic Reconstructive Surgery service prior to coming to Yale. Dr. Bercik has extensive experience with vaginal, laparoscopic and abdominal reconstructive procedures for conditions including urinary incontinence, fecal incontinence, pelvic organ prolapse and vaginal fistulae. Dr. Bercik is a Fellow of the American College of Obstetrics and Gynecology and is Board-Certified.

- Dr. Connell earned her medical degree from the University of Illinois at Chicago School of Medicine. She completed her residency and served as Academic Chief Resident at Saint Louis University School of Medicine in St. Louis, MO. She completed a comprehensive fellowship program in Female Pelvic Medicine and Reconstructive Surgery at the Alpert Medical School of Brown University at Women and Infants’ Hospital of Rhode Island. She was recruited to Yale in 2009 where she will pursue research in epidemiology of pelvic floor disorders, clinical outcomes and quality improvement in gynecology. Dr. Erekson is certified by The American Board of Obstetrics and Gynecologists and specializes in robotic, laparoscopic, and minimally invasive vaginal reconstructive approaches to surgery for urinary incontinence and prolapse.

- Dr. Guess is certified by The American Board of Obstetrics and Gynecologists and specializes in pelvic floor reconstructive surgery.

- Dr. Richmond obtained her MS from the Women’s Health Nurse Practitioner Program at Columbia University in New York. She worked as Nurse Practitioner in the Department of Urology at New York Presbyterian Hospital/Weill Medical College of Cornell University. She specializes in pelvic floor muscle rehabilitation with electrical stimulation, urodynamics studies, and acupuncture with stimulation. She also treats patients with various urogynecological and gynecological conditions.
