Endocrine, Head, and Neck Pathology

The Endocrine, Head, and Neck Pathology Program supports the Yale-New Haven Hospital endocrine referral center, one of the largest in the nation for the treatment of thyroid and parathyroid diseases. The Head and Neck Oncology service is a tertiary referral center in Connecticut and treats complex and rare cancer cases. The senior lead pathologist on the team has more than 10 years experience in this area, and is readily accessible for second opinions and consultations. Our immunohistochemistry laboratory is well equipped for extensive work-up of undifferentiated tumors. Our cytopathologists have extensive experience in Fine Needle Aspiration of thyroid and other head and neck nodules.

Manju Prasad, M.D.
Professor of Pathology
Director, Endocrine, Head and Neck Pathology
Director, Immunohistochemistry Laboratory

Andrea Barbieri, M.D.
Instructor in Pathology

Hematopathology

The Yale Hematopathology Program provides state-of-the-art diagnostics with an emphasis on molecular techniques for the diagnosis of hematological disorders. Areas of expertise include leukemia, lymphoma, multiple myeloma, myeloproliferative myelodysplastic syndromes, dysproteinemias, coagulation disorders, red blood cell diseases, and hemoglobinopathies. We offer a complete consultation service in coagulation disorders, with state-of-the-art functional, proteomic, and genetic testing. The partnership between Yale Pathology and Laboratory Medicine allows us to offer comprehensive services that ensure a multidisciplinary approach to diagnosis and permit clinicopathological correlation.

S. David Hudnall, M.D.
Professor of Pathology
Director, Hematopathology Program

Demetrios T. Braddock, M.D., Ph.D.
