The purpose of this study is to determine if participants with long standing diabetes (of greater than two years) continue to produce some insulin. We will compare participants who received anti-CD3 treatment 9-10 years ago with those who have not.

To be screened for this study:

- You must have had Type 1 Diabetes 2 years or more
- Age 15-40
- Weigh at least 30 kg (66 lbs)
- Not pregnant
