The Department of Pathology at the Yale School of Medicine is seeking applications for up to three full-time appointments at the Assistant or Associate Professor level (Ph.D. or M.D./Ph.D.) to build an interdisciplinary research program in the new Yale Center for Research on Aging (Y-Age). The Center is largely housed in the Department of Pathology, but will have strong ties with other Yale School of Medicine Departments and Centers and the Yale University community.

Successful candidates will be expected to establish a competitive and impactful research program in the basic biology of aging, but with an eye on translation of findings into the role of aging in neurodegeneration, inflammatory processes, metabolic disorders, or cancer. Other responsibilities will include contributions to Yale’s teaching and service missions and, if appropriate, its clinical programs.

Appointment to the faculty of the Yale School of Medicine and the Graduate School of Arts and Sciences will be at a rank commensurate with accomplishments and experience.

All application materials must be uploaded through the following interfolio website: (https://apply.interfolio.com/36112). These include a curriculum vitae, a two-page summary of the candidate’s current and proposed research program, and letters of recommendation from three senior references who are familiar with their work and accomplishments.

Specific inquiries can be directed to Gerald S. Shadel, Ph.D., Director: Yale Center for Research on Aging, Yale School of Medicine, 310 Cedar Street, New Haven CT 06510 by email to gerald.shadel@yale.edu.

Initial deadline is December 1, 2016, but the search will remain open until positions are filled.

"Yale University is an Affirmative Action/Equal Opportunity Employer and welcomes applications from women, persons with disabilities, protected veterans and members of minority groups."
