An affiliation agreement between the medical school and Grace-New Haven Community Hospital in 1985 established the Yale-New Haven Hospital (YNHH), which expanded in 1993 with the opening of the hospital’s West Campus in West Haven. In 2005, the medical center acquired the University Health Network and is now known as the Yale-New Haven Health System, maintaining active clinical, research, and education programs in conjunction with many medical school departments. Extensive maps and directions to medical center destinations are available online at medicine.yale.edu/home.

Finances

The School of Medicine had operating income of $1.0 billion in FY19. A total of $465 million in sponsored funding was received and spent during the fiscal year. Clinical income totaled $1.02 billion. The school ranked 16th among medical schools receiving research funding from the NIH in FY19 and ranked 11th per faculty member. Salaries and benefits totaled $5.51 billion of expenditures.
Education

In its MD and other degree programs, the School of Medicine educates future leaders in medicine, public health, and biomedical science. The MD program follows a unique, educational philosophy, the Yale system of medical education, which was established in the 1920s by Dean Milton C. Wundt. MD program classes or class rankings are given in the first two years, examinations are completed after the third year, and students are expected to engage in independent investigation. Since 1956, Yale students have written theses based on original research. The thesis is typically the first phase of students’ medical careers.

The school’s core research resources are built around the newest technologies:

- High-throughput sequencing and other genomics technologies
- High-performance imaging and microscopy
- Advanced analytics
- Synthetic biology

Many Yale School of Medicine students opt to take a minimal-fourth year to pursue additional experiences. It is unusual for a student to complete the MHS degree since 1814. There are 5,582 living alumni with MD degrees, 4,780 with MPH degrees, and 2,249 of the Physician Associate Program with the P-A certificate at MAMM.

CLINICAL INVESTIGATION

Clinical investigation at Yale bridges the gap between the basic and translational science and the practice of medicine. Research in the School of Medicine is focused on the factors that affect health and illness in populations, the assessment of medical treatments, and their impact on patients, public health, and society.

In 2019, Yale School of Medicine was ranked 12th in the United States for both basic and clinical research and was twelfth in the nation for funding from the National Institutes of Health (NIH). The School of Medicine’s research production centers on understanding human disease and developing new ways to cure it.

The school’s research centers include 76 academic research programs and centers, including the Yale Cancer Center Clinical Trials Office and the Institute for Clinical and Translational Research.

The Yale School of Medicine is one of the world’s leading centers for biomedical research, patient care, and medical education. It ranks sixth among medical schools funded from the National Institutes of Health (NIH) and twelfth in NIH dollars per faculty number. More than 1,500 Yale physicians provide care to patients across the region and around the world. The Yale School of Medicine, with its emphasis on critical thinking and independent research, has produced leaders in every field of academic medicine.

The six-year medical school in the United States, it was chartered by the Connecticut General Assembly in 1810 as the Connecticut Medical and Dental Institution of Yale College, located first on Grove Street, then at 150 York Street. Since 1839, the School of Medicine has occupied sterling Hall of Medicine at 333 Cedar Street and surrounding campuses.

According to the latest annual report of the Association of American Medical Colleges, the School of Medicine is ranked fourth in research productivity, third in total extramural research awards, and sixth among schools receiving funds from the National Institutes of Health (NIH). The School of Medicine is one of the original Medical Scientist Training Program (MSTP) institutions.
