Patients with **known** COVID-19 infection:

Safe to image at any site if **ALL** the following are met:
- 10 days after the onset of symptoms or day of positive test (if patient asymptomatic)
  - (20 days for severe cases or for immunocompromised)
- **AND**
- 24 hours fever free
  - *(Without fever reducing medications)*
- **AND**
  - Other symptoms are **improving**
Determining COVID precautions for COVID-19 positive outpatients, including those with immunocompromise, history of cancer or recovery from severe COVID infection

1. **Isolation Initiated for Suspected COVID**
   - COVID test performed
   - **Positive result or**
     - Negative result with suggestive clinical picture

2. **Does patient meet any of the 3 criteria below?**
   - Required ICU or step down admission
   - Immunocompromised *
   - Post transplant

3. **Did patient have symptoms of COVID during their course of illness?**
   - No
     - 10 days have passed since positive test
       - No
         - Isolate until 10 days post positive test, then
       - Yes
         - Afebrile for ≥ 24 hours
           - Symptoms have improved
           - At least 10 days have passed since positive test
             - No
               - Isolate until above criteria is met, then
             - Yes
               - Contact Infection Prevention to remove COVID iso reason and resolve banner

   - Yes
     - Afebrile for ≥ 24 hours
       - Symptoms have improved
       - At least 10 days have passed since positive test
         - Isolate until above criteria is met, then
       - No
         - Refer to decision tree on next page

4. **Is the patient post stem cell or solid organ transplant or CART within the past year?**
   - Yes
     - **Refer to decision tree on next page**
   - No
     - **Refer to decision tree on next page**

5. **Did patient have symptoms of COVID during their course of illness?**
   - No
     - 20 days have passed since positive test
       - Isolate until 20 days post positive test, then
     - Yes
       - Afebrile for ≥ 24 hours
         - Symptoms have improved
         - At least 20 days have passed since initial positive test
           - No
             - Isolate until above criteria is met, then
           - Yes
             - Refer to decision tree on next page

---

*Immunocompromised: high dose steroids for ≥ 14 days, HIV with CD4 count <200, chemo/immuno therapy for cancer (see Appendix A of policy for details)
