

Protect Your Hands When Using Solvents

- 👍 Wear gloves - keep solvents off your skin at all times.
- 👍 No single glove protects against every solvent.
- 👍 Some solvents go through any glove.
- 👍 The longer a glove comes into contact with solvent, the more the solvent goes through or dissolves the glove.
- 👍 Nitrile gloves are the most resistant to isocyanates, hardeners and other body shop solvents.

- 👍 Discard and replace your nitrile gloves after each painting cycle and after each use.
