

This is the 12-month version of CIDI 2.1. Version 2.1 of the CIDI-Core is the third authorized version of the Composite International Diagnostic Interview (CIDI). It has been developed in consultation with numerous experts and tested in many countries. A brief history of its development can be found in the CIDI Researcher's Manual.

The proper use of this instrument requires appropriate training of interviewers, careful editing of interview schedules, so as to be certain that data are complete, accurately coded, and logically consistent across questions, and computer scoring. The interview should be used only in conjunction with its supporting materials. These include a CIDI Researcher's Manual, a CIDI Interviewer's Manual, and a CIDI computer diskette for data entry, cleaning, and scoring, along with its Computer Manual.

No translation of this instrument into any language should be prepared or released without the express permission of the World Health Organization, Geneva.

All correspondence (including enquiries about training, translation, and use of the instrument) should be addressed to:

<sup>1</sup> The CIDI is structured in sections from A (Demographics) to X (Interviewer ratings). Questions are identified by section letter and number. Although DSM-IV as well as ICD diagnoses are made, only the F numbers from ICD-10 are shown.

## ..... CIDI FORMAT CONVENTIONS

1. All questions are to be read, unless there is a skip instruction associated with a code or following the question. If not instructed to skip, the interviewer always drops to the next instruction or question after coding a response. All questions are numbered from A1 to X9. The first question following a line across the page is a main question.
2. Capitalized text is reserved for interviewer instructions. Capitalized interviewer instructions where coding is required are numbered.
3. Questions to be read to the respondent are written in lower case type. Lower case words in parentheses that contain no slashes are to be read only if needed to clarify the meaning. Lower case words within parentheses that are separated by slashes are for the interviewer to select among, depending on previous responses. Capitalized words in parentheses are generic items, which should be replaced by the term previously volunteered by the respondent. Words inside a left bracket [ are to be read in the first reading. When the interviewer returns a second time for Column II, the phrase from the left bracket to the end of the question is read.
4. There are different types of questions and coding patterns in the CIDI:
  - (a) Questions that directly indicate the meaning of the code (no = 1, yes = 5)
  - (b) Questions with horizontal codes labelled PRB: 1 2 3 4 5 begin with the interview question, but are then followed up with questions as described in the Probe Flow Chart (PFC). The Probe Flow Chart is attached to the back of the interview.
  - (c) Horizontal codes labelled ONS (Onset) and REC (Recency) are scored with questions in the Probe Flow Chart.
  - (d) Probe Flow Chart questions include a generic reference to the symptom being scored: (SX). The interviewer substitutes the underlined words in the interview question for the additional Probe, ONS and REC questions.
  - (e) When a phrase labelled "SX = " appears below the question, there is no underlined word in the question, and this phrase is to be substituted in the Probe Flow Chart question.
5. The INDEX in the left margin of the interview shows the corresponding Diagnosis, the Diagnostic System, and the specific criterion for which this question is being used in the diagnostic algorithm. Interviewers may ignore the Index.
6. Interviewer and Respondent Cards: In some sections of the interview the interviewer is directed to use interviewer and respondent cards. These are attached to the back of the CIDI interview.
7. Probe Flow Chart: The meaning of the PRB, ONS, and REC codes is explained in the Probe Flow Chart attached to the interview.
