## Neuroproteomics

Guest Editors:

### **Prof. Dr. Angus C. Nairn**

Charles B. G. Murphy Professor of Psychiatry, Co-Director, Yale/NIDA Neuroproteomics Center; Department of Psychiatry, Yale University School of Medicine, New Haven, CT, USA.  
angus.nairn@yale.edu

### **Dr. Kenneth R. Williams**

Professor (Adjunct) of Research, Co-Director, Yale/NIDA Neuroproteomics Center; Founder, Keck Foundation Biotechnology Resource Laboratory; Department of Molecular Biophysics & Biochemistry, Yale University School of Medicine, New Haven, CT, USA  
kenneth.williams@yale.edu

Deadline for manuscript submissions:

**15 September 2018**

## Message from the Guest Editors

Dear Colleagues,

This Special Issue will contain research and review articles that cover whole proteome analysis, comparative proteomics, protein structure/function, protein post-translational modifications, protein:ligand and protein:protein interactions within normal and diseased neurological tissues. Manuscripts are also especially sought that describe the development and use of technologies such as “Top-Down” to identify combinatorial epigenetic changes in histone modification and targeted MS to obviate the stochastic nature of discovery MS/proteomics that are applicable to neurological analyses. Another area of special interest is the use of bioinformatics approaches to integrate RNA and protein level analyses so peptide identification rates can be improved by carrying out MS/MS database searches on brain region- and cell type-specific proteomes that have been predicted based on RNA-sequencing.

We look forward to receiving your manuscripts and compiling an outstanding collection of review and original research articles that will advance the field of neuroproteomics.
