The Yale system is fundamental to our school. It’s really about lifelong learning and about collaborating together to learn together. Students have the freedom to build their own paths. You don’t have to wait till after medical school to start becoming the doctor you want to be. You don’t really hear no, you hear. How can we make this happen? We have advisors and coaches and faculty that are all here to help. They also model the behavior.
of lifelong learning for our
students in the hospital.
They model what it is to be curious about their patients,
to consult with each other,
and then to advance knowledge so that we can address new discoveries. At the end of the day, medicine is a team sport. It’s you, other physicians. You’ll be working with support staff like nurses, caseworkers. So to be able to learn how to interact in a team environment only propels medicine forward it really.
that they’re learning for their future not to get a certain grade. I think the most important part is that we really are each other’s cheerleaders. We’re not running the same race, we’re not even on the same paths. And that really, opens the doors for like, people doing very, very incredibly unique things. Medical School is a difficult time. There’s a lot to learn. But at the end of the day, when you’re surrounded by what feels more like a family,
that makes getting through it just so much easier.
