As creative leaders in medicine and science, we constantly push boundaries to advance medicine for the benefit of humanity. In doing so, it is also our moral imperative to pursue Health Equity no matter the cause of the disparities that negatively impact the health of many populations. Here at Yale School of Medicine, we work every day to be a leader in Health Equity and Health Equity research.
achieve their greatest potential.

We're thinking not just about the methods, but also about the impact. I'm profoundly excited to be at Yale, within the office of Health Equity Research, where we've thought. Concretely, about how best to engage, how best to train some of the brightest minds in our community to work in service of our collective goals of trying to improve the health and well-being of people.

You know, the things that shape our health geography, where we live, yes, how we identify, how we work together to achieve these goals.
but also what access we have in terms of resources, finances, educational opportunity.

Almost everything you get exposed to is a contributor to your ultimate health. Really special and unique about Yale is the collaboration across the School of Medicine with disciplines that really go from general internal medicine, addiction, genetics, cell biology, all the way through the law school. We’ve been fortunate to launch Scholars within History, Scholars within Ethics.
several signature initiatives to advance HealthEquity research. We have the Community Research Fellowship program.

We’ve launched the Community HealthEquity Accelerator. We have the Community Research Innovation Summit. We bring together experts, not just locally but regionally around the country. We have policymakers as partners who are eager, who trust the science that comes out of Yale School of Medicine. So the work we do will drive policy.
It will change practice.

It will make a difference. You know,

in the United States,

we’ve incarcerated more than almost any country in the world.

Individuals that are incarcerated,

especially upon release,

have it disproportionately high rates of morbidity.

Going to the hospital,

or even deaths from largely preventable health conditions,

people die.
In our country, every single day, because of health disparities, that is. Unacceptable. A gift for HealthEquity research. Will go so incredibly far in making deep and sustained change. It’s about implementation and action and impact. Learn how your gift can help create affordable, equitable, and inclusive healthcare for all. Connect with a Development Officer today.
