## WEBVTT

00:00:00.000 --> 00:00:01.960 Funding for Yale Cancer Answers

NOTE Confidence: 0.9596496

 $00{:}00{:}01.960 \dashrightarrow 00{:}00{:}03.920$  is provided by Smilow Cancer

NOTE Confidence: 0.9596496

 $00:00:03.990 \longrightarrow 00:00:05.690$  Hospital and AstraZeneca.

NOTE Confidence: 0.9717902

 $00{:}00{:}07.760 \dashrightarrow 00{:}00{:}09.872$  Welcome to Yale Cancer Answers with

NOTE Confidence: 0.9717902

 $00:00:09.872 \longrightarrow 00:00:11.872$  your host, doctor Anees Chagpar.

NOTE Confidence: 0.9717902

00:00:11.872 --> 00:00:13.487 Yale Cancer Answers features

NOTE Confidence: 0.9717902

00:00:13.487 --> 00:00:15.577 the latest information on cancer

NOTE Confidence: 0.9717902

 $00{:}00{:}15.577 \dashrightarrow 00{:}00{:}17.712$  care by welcoming on cologists and

NOTE Confidence: 0.9717902

 $00:00:17.712 \longrightarrow 00:00:19.667$  specialists who are on the forefront of

NOTE Confidence: 0.9717902

00:00:19.667 --> 00:00:21.852 the battle to fight cancer. This week,

NOTE Confidence: 0.9717902

 $00{:}00{:}21.852 \dashrightarrow 00{:}00{:}23.632$  it's a conversation about lung

NOTE Confidence: 0.9717902

 $00:00:23.632 \longrightarrow 00:00:25.360$  cancer with Doctor Anne Chiang.

NOTE Confidence: 0.9717902

 $00{:}00{:}25.360 \dashrightarrow 00{:}00{:}27.874$  Doctor Chiang is an associate professor

NOTE Confidence: 0.9717902

 $00:00:27.874 \dashrightarrow 00:00:30.717$  in medical oncology at the Yale School

NOTE Confidence: 0.9717902

 $00:00:30.717 \longrightarrow 00:00:33.265$  of Medicine where Doctor Chagpar is

 $00:00:33.340 \longrightarrow 00:00:35.980$  a professor of surgical oncology.

NOTE Confidence: 0.9712131

 $00:00:35.980 \longrightarrow 00:00:38.200$  Let's start at the beginning.

NOTE Confidence: 0.9712131

 $00:00:38.200 \longrightarrow 00:00:40.594$  I think a lot of

NOTE Confidence: 0.9712131

 $00:00:40.594 \longrightarrow 00:00:42.639$  people know about lung cancer,

NOTE Confidence: 0.9712131

 $00:00:42.640 \longrightarrow 00:00:44.308$  but this whole differentiation

NOTE Confidence: 0.9712131

00:00:44.308 --> 00:00:46.810 between small cell, non small cell

NOTE Confidence: 0.9712131

 $00:00:46.884 \longrightarrow 00:00:49.300$  tell us a little bit more about that.

NOTE Confidence: 0.9712131

 $00:00:49.300 \longrightarrow 00:00:51.150$  What exactly is the difference?

NOTE Confidence: 0.9712131

 $00:00:51.150 \longrightarrow 00:00:53.740$  How many people are affected by each?

NOTE Confidence: 0.9712131

 $00:00:53.740 \longrightarrow 00:00:55.960$  And why should we care?

NOTE Confidence: 0.9712131

 $00:00:55.960 \longrightarrow 00:00:59.016$  I think that the basics about

NOTE Confidence: 0.9712131

 $00:00:59.016 \longrightarrow 00:01:01.879$  lung cancer are that they form in the lung.

NOTE Confidence: 0.9712131

 $00:01:01.880 \longrightarrow 00:01:03.730$  There's mainly two different types,

NOTE Confidence: 0.9712131

 $00:01:03.730 \longrightarrow 00:01:05.998$  small cell, that underneath the microscope

NOTE Confidence: 0.9712131

 $00:01:06.000 \longrightarrow 00:01:08.674$  the pathologist looks at the cells and

NOTE Confidence: 0.9712131

00:01:08.674 --> 00:01:11.566 they're very small and round and blue,

 $00:01:11.566 \longrightarrow 00:01:14.050$  and everything else which is non small cell.

NOTE Confidence: 0.9712131

 $00:01:14.050 \longrightarrow 00:01:16.000$  The small cell kind is typically

NOTE Confidence: 0.9712131

 $00:01:16.000 \longrightarrow 00:01:18.080$  a little bit more aggressive.

NOTE Confidence: 0.9712131

00:01:18.080 --> 00:01:19.544 It grows more quickly.

NOTE Confidence: 0.9712131

 $00:01:19.544 \longrightarrow 00:01:21.008$  It tends to spread.

NOTE Confidence: 0.9712131

 $00:01:21.010 \longrightarrow 00:01:23.488$  There are different types that I typically

NOTE Confidence: 0.9712131

00:01:23.488 --> 00:01:25.758 tell my patients are like chocolate,

NOTE Confidence: 0.9712131

 $00:01:25.760 \longrightarrow 00:01:26.858$  vanilla and pistachio.

NOTE Confidence: 0.9712131

 $00:01:26.858 \longrightarrow 00:01:28.688$  There is adenocarcinoma,

NOTE Confidence: 0.9712131

00:01:28.690 --> 00:01:29.785 squamous cell carcinoma,

NOTE Confidence: 0.9712131

 $00:01:29.785 \longrightarrow 00:01:31.245$  and other types,

NOTE Confidence: 0.9712131

 $00:01:31.250 \longrightarrow 00:01:33.578$  and they really are simply

NOTE Confidence: 0.9712131

 $00{:}01{:}33.578 \dashrightarrow 00{:}01{:}36.120$  different types that act a little bit differentty.

 $00:01:36.572 \longrightarrow 00:01:39.736$  They look a little bit different

NOTE Confidence: 0.9712131

 $00:01:39.736 \longrightarrow 00:01:41.510$  underneath the microscope,

NOTE Confidence: 0.9712131

 $00{:}01{:}41.510 \dashrightarrow 00{:}01{:}43.910$  and sometimes there are molecular

 $00:01:43.910 \longrightarrow 00:01:47.425$  markers that can help us to understand

NOTE Confidence: 0.9712131

 $00{:}01{:}47.425 \dashrightarrow 00{:}01{:}49.990$  a particular subtype that might

NOTE Confidence: 0.9712131

00:01:49.990 --> 00:01:52.778 be responsive to taking a pill,

NOTE Confidence: 0.9712131

 $00:01:52.780 \longrightarrow 00:01:56.210$  for example, instead of IV medication.

NOTE Confidence: 0.92404133

 $00:01:57.190 \longrightarrow 00:02:00.130$  Of all of these types the first

NOTE Confidence: 0.92404133

 $00:02:00.130 \longrightarrow 00:02:02.090$  question is which type are

NOTE Confidence: 0.92404133

 $00:02:02.090 \longrightarrow 00:02:03.590$  the most common.

 $00{:}02{:}07.090 \dashrightarrow 00{:}02{:}09.862$  You say the small cells are a little bit

NOTE Confidence: 0.92404133

 $00{:}02{:}09.862 \dashrightarrow 00{:}02{:}12.254$  more aggressive than the non small

NOTE Confidence: 0.92404133

 $00:02:12.254 \longrightarrow 00:02:14.498$  cells and even within that there's

NOTE Confidence: 0.92404133

 $00{:}02{:}14.498 \dashrightarrow 00{:}02{:}17.270$  a whole bunch of different types.

NOTE Confidence: 0.92404133

 $00:02:17.270 \longrightarrow 00:02:18.488$  What type is most common?

 $00:02:19.651 \longrightarrow 00:02:20.812$  What's the distribution

NOTE Confidence: 0.95026827

 $00:02:20.812 \longrightarrow 00:02:22.960$  in terms of these cancers?

NOTE Confidence: 0.95026827

00:02:22.960 --> 00:02:25.634 The most common type is

NOTE Confidence: 0.95026827

00:02:25.634 --> 00:02:28.211 non small cell and pretty much

 $00:02:28.211 \longrightarrow 00:02:29.779 80-85\%$  of lung cancer

NOTE Confidence: 0.95026827

 $00:02:29.779 \longrightarrow 00:02:32.390$  is non small cell and then

NOTE Confidence: 0.95026827

 $00:02:32.473 \longrightarrow 00:02:35.170$  15-20% is small cell

NOTE Confidence: 0.95026827

 $00:02:35.170 \longrightarrow 00:02:37.610$  and so we know that smoking

NOTE Confidence: 0.95026827

 $00:02:37.610 \longrightarrow 00:02:40.208$  is related to lung cancer,

NOTE Confidence: 0.95026827

 $00:02:40.210 \longrightarrow 00:02:42.989$  but are there specific risk factors for

NOTE Confidence: 0.95026827

 $00:02:42.989 \longrightarrow 00:02:45.839$  getting each of these different types,

NOTE Confidence: 0.95026827

 $00:02:45.840 \longrightarrow 00:02:49.728$  or is it kind of all just a mishmash

NOTE Confidence: 0.9819167

 $00{:}02{:}49.730 \dashrightarrow 00{:}02{:}54.060$  and which type you get is luck of the draw?

NOTE Confidence: 0.9819167

00:02:54.060 --> 00:02:57.119 Smoking is definitely a risk factor for

NOTE Confidence: 0.9819167

 $00{:}02{:}57.119 \dashrightarrow 00{:}03{:}00.127$  both non small cell and small cell.

NOTE Confidence: 0.9819167

 $00:03:00.130 \longrightarrow 00:03:03.161$  That being said, there are folks who

NOTE Confidence: 0.9819167

 $00:03:03.161 \longrightarrow 00:03:05.336$  are never smokers, a small population

NOTE Confidence: 0.9819167

 $00:03:05.336 \longrightarrow 00:03:07.964$  of never smokers or light smokers

NOTE Confidence: 0.9819167

 $00:03:07.970 \longrightarrow 00:03:12.458$  who may develop mutations in specific

NOTE Confidence: 0.9819167

00:03:12.458 --> 00:03:18.990 genes called EGFR or ALK ROS1.

 $00:03:18.990 \longrightarrow 00:03:21.804$  Some of these mutations are

NOTE Confidence: 0.9819167

 $00:03:21.804 \longrightarrow 00:03:25.149$  called oncogenes and these mutations

 $00:03:27.449 \longrightarrow 00:03:30.167$  tend to lead to lung cancer.

NOTE Confidence: 0.9819167

00:03:30.170 --> 00:03:33.194 A specific kind and because it's

NOTE Confidence: 0.9819167

 $00:03:33.194 \longrightarrow 00:03:36.875$  not sort of the same as the lung

NOTE Confidence: 0.9819167

 $00{:}03{:}36.875 \dashrightarrow 00{:}03{:}39.957$  cancer that comes from smoking where

NOTE Confidence: 0.9819167

 $00:03:39.957 \longrightarrow 00:03:43.442$  repeated exposure and inflammation to

NOTE Confidence: 0.9819167

 $00:03:43.442 \longrightarrow 00:03:47.520$  carcinogens caused lung cancer,

NOTE Confidence: 0.9819167

00:03:47.520 --> 00:03:49.640 those patients with, for example,

NOTE Confidence: 0.9819167

 $00:03:49.640 \longrightarrow 00:03:52.560$  a mutation in EGFR can actually be treated

NOTE Confidence: 0.9819167

00:03:52.560 --> 00:03:55.979 with a targeted therapy that targets EGFR,

NOTE Confidence: 0.9819167

 $00:03:55.980 \longrightarrow 00:03:58.518$  and that, as I said before,

NOTE Confidence: 0.9819167

 $00:03:58.520 \longrightarrow 00:04:01.648$  is often in the shape of a

NOTE Confidence: 0.9819167

 $00{:}04{:}01.648 --> 00{:}04{:}04.438$  pill that you can take daily.

NOTE Confidence: 0.9819167

 $00:04:04.440 \longrightarrow 00:04:07.352$  So it's really important when

NOTE Confidence: 0.9819167

 $00:04:07.352 \longrightarrow 00:04:09.519$  you're diagnosed with lung cancer

 $00:04:09.520 \longrightarrow 00:04:11.630$  to understand the pathology and

NOTE Confidence: 0.9819167

 $00{:}04{:}11.630 \dashrightarrow 00{:}04{:}13.318$  specifically the molecular pathology.

NOTE Confidence: 0.9819167

 $00:04:13.320 \longrightarrow 00:04:16.026$  That means the kinds of mutations

NOTE Confidence: 0.9819167

 $00:04:16.026 \longrightarrow 00:04:17.830$  that might be available.

NOTE Confidence: 0.9819167

 $00:04:17.830 \longrightarrow 00:04:19.480$  Especially if

NOTE Confidence: 0.9819167

00:04:19.480 --> 00:04:20.612 you've never smoked,

NOTE Confidence: 0.9819167

00:04:20.612 --> 00:04:23.154 or if you have a very light history

NOTE Confidence: 0.9819167

00:04:23.154 --> 00:04:25.089 or remote history of smoking

 $00:04:26.410 \longrightarrow 00:04:29.074$  For the people who have never smoked or

NOTE Confidence: 0.89279914

00:04:29.074 --> 00:04:31.997 have a very light history of smoking,

NOTE Confidence: 0.89279914

 $00:04:32.000 \longrightarrow 00:04:34.472$  are they more likely to get one

NOTE Confidence: 0.89279914

 $00:04:34.472 \longrightarrow 00:04:37.324$  type of lung cancer in terms of small

NOTE Confidence: 0.89279914

 $00:04:37.324 \longrightarrow 00:04:40.030$  cell versus non small cell than others?

NOTE Confidence: 0.89279914

 $00:04:40.030 \longrightarrow 00:04:41.422$  And these mutations that

NOTE Confidence: 0.89279914

00:04:41.422 --> 00:04:42.466 you're talking about,

NOTE Confidence: 0.89279914

 $00:04:42.470 \longrightarrow 00:04:44.498$  are they more common in small

 $00:04:44.498 \longrightarrow 00:04:47.009$  cell or non small cell or does it

NOTE Confidence: 0.98069865

 $00:04:47.010 \longrightarrow 00:04:48.750$  make a difference at all?

NOTE Confidence: 0.98069865

 $00:04:48.750 \longrightarrow 00:04:50.856$  So these mutations that I spoke

NOTE Confidence: 0.98069865

 $00:04:50.856 \longrightarrow 00:04:53.324$  of are more common in non small

NOTE Confidence: 0.98069865

 $00:04:53.324 \longrightarrow 00:04:55.634$  cell and those folks who are light

NOTE Confidence: 0.98069865

00:04:55.707 --> 00:04:57.813 or never smokers are more likely

NOTE Confidence: 0.98069865

00:04:57.813 --> 00:05:00.522 to develop non small cell lung

NOTE Confidence: 0.98069865

 $00{:}05{:}00.522 \dashrightarrow 00{:}05{:}03.126$  cancer than small cell lung cancer.

NOTE Confidence: 0.98069865

00:05:03.130 --> 00:05:05.506 Typically it has rarely happened

NOTE Confidence: 0.98069865

 $00{:}05{:}05.506 \dashrightarrow 00{:}05{:}07.906$  that I've seen patients who never

NOTE Confidence: 0.98069865

 $00:05:07.906 \longrightarrow 00:05:10.144$  smoked develop small cell cancer,

NOTE Confidence: 0.98069865

 $00:05:10.150 \longrightarrow 00:05:12.490$  but typically there is a history

NOTE Confidence: 0.98069865

00:05:12.490 --> 00:05:13.660 of smoking.

NOTE Confidence: 0.9868976

 $00:05:13.660 \longrightarrow 00:05:15.220$  You mentioned earlier that

NOTE Confidence: 0.9868976

 $00:05:15.220 \longrightarrow 00:05:17.170$  small cell were more aggressive.

 $00:05:17.170 \longrightarrow 00:05:19.120$  Tell us about the prognosis.

NOTE Confidence: 0.9868976

 $00:05:19.120 \longrightarrow 00:05:22.306$  So it sounds to me like if you're going

NOTE Confidence: 0.9868976

 $00:05:22.306 \longrightarrow 00:05:25.343$  to have a choice you would prefer to

NOTE Confidence: 0.9868976

 $00:05:25.343 \longrightarrow 00:05:28.477$  have a non small cell lung cancer.

NOTE Confidence: 0.9868976

 $00:05:28.480 \longrightarrow 00:05:31.600$  But how bad is one versus the other?

NOTE Confidence: 0.98789674

 $00:05:32.500 \longrightarrow 00:05:34.964$  I think that the key thing to

NOTE Confidence: 0.98789674

 $00:05:34.964 \longrightarrow 00:05:37.264$  know for both is that there have

NOTE Confidence: 0.98789674

 $00:05:37.264 \longrightarrow 00:05:39.937$  really been a lot of advances such

NOTE Confidence: 0.98789674

 $00{:}05{:}39.937 \dashrightarrow 00{:}05{:}42.392$  that we've actually seen improvements

NOTE Confidence: 0.98789674

 $00:05:42.392 \longrightarrow 00:05:45.342$  in the outcomes for both non small

NOTE Confidence: 0.98789674

 $00:05:45.342 \longrightarrow 00:05:48.040$  cell and small cell.

NOTE Confidence: 0.98789674

 $00:05:48.040 \longrightarrow 00:05:50.483$  And this was just published last year

NOTE Confidence: 0.98789674

 $00:05:50.483 \longrightarrow 00:05:53.299$  in the New England Journal of Medicine

NOTE Confidence: 0.98789674

 $00:05:53.299 \longrightarrow 00:05:56.261$  that the incidence of both

NOTE Confidence: 0.98789674

00:05:56.261 --> 00:05:58.704 these and the outcomes of both

NOTE Confidence: 0.98789674

 $00:05:58.704 \longrightarrow 00:06:00.950$  these types of cancers are improving.

 $00:06:00.950 \longrightarrow 00:06:02.875$  So I think that's a

NOTE Confidence: 0.98789674

 $00{:}06{:}02.880 \dashrightarrow 00{:}06{:}06.606$  really important message to know.

NOTE Confidence: 0.98789674

 $00:06:06.610 \longrightarrow 00:06:09.004$  The other aspect of how

NOTE Confidence: 0.98789674

 $00:06:09.004 \longrightarrow 00:06:11.280$  you're going to do

NOTE Confidence: 0.98789674

 $00{:}06{:}11.280 \to 00{:}06{:}12.844$  with this particular cancer

NOTE Confidence: 0.98789674

 $00:06:12.850 \longrightarrow 00:06:15.046$  has to do with staging,

NOTE Confidence: 0.98789674

 $00:06:15.050 \longrightarrow 00:06:17.270$  and that just means the geography

NOTE Confidence: 0.98789674

 $00{:}06{:}17.270 \dashrightarrow 00{:}06{:}20.249$  of where the cancer is in your body

NOTE Confidence: 0.98789674

 $00:06:20.249 \longrightarrow 00:06:22.385$  when when you're diagnosed with it.

 $00:06:24.590 \longrightarrow 00:06:26.872$  If you have tumors that are just

NOTE Confidence: 0.98789674

 $00{:}06{:}26.872 \dashrightarrow 00{:}06{:}29.547$  in the lung or have migrated

NOTE Confidence: 0.98789674

 $00:06:29.547 \longrightarrow 00:06:31.567$  into very nearby lymph nodes,

NOTE Confidence: 0.98789674

 $00:06:31.570 \longrightarrow 00:06:34.153$  then you may be have a stage one

NOTE Confidence: 0.98789674

 $00:06:34.153 \longrightarrow 00:06:36.518$  or stage two cancer.

NOTE Confidence: 0.98789674

 $00:06:36.520 \longrightarrow 00:06:39.054$  You may be eligible for a local

NOTE Confidence: 0.98789674

 $00{:}06{:}39.054 \dashrightarrow 00{:}06{:}41.029$  treatment like surgery or radiation

 $00:06:41.029 \longrightarrow 00:06:43.483$  in combination with chemotherapy to

NOTE Confidence: 0.98789674

 $00{:}06{:}43.483 \dashrightarrow 00{:}06{:}46.047$  really try to remove that tumor,

NOTE Confidence: 0.98789674

00:06:46.050 --> 00:06:49.090 and that's when you have the best prognosis,

NOTE Confidence: 0.98789674

00:06:49.090 --> 00:06:51.334 regardless if it's non

NOTE Confidence: 0.98789674

 $00:06:51.334 \longrightarrow 00:06:53.280$  small cell or small cell.

NOTE Confidence: 0.98789674

 $00:06:53.280 \longrightarrow 00:06:56.178$  Overall, folks with non small cell

NOTE Confidence: 0.98789674

00:06:56.178 --> 00:06:59.234 do little bit better. But again,

NOTE Confidence: 0.98789674

00:06:59.234 --> 00:07:00.920 having lung cancer,

NOTE Confidence: 0.98789674

 $00:07:00.920 \longrightarrow 00:07:03.158$  it's definitely a treatable disease.

NOTE Confidence: 0.98789674

 $00:07:03.160 \longrightarrow 00:07:05.398$  If you have stage four cancer,

NOTE Confidence: 0.98789674

 $00{:}07{:}05.400 \dashrightarrow 00{:}07{:}08.028$  which means that you've had disease

NOTE Confidence: 0.98789674

 $00{:}07{:}08.028 \dashrightarrow 00{:}07{:}10.492$  that has traveled outside of the

NOTE Confidence: 0.98789674

 $00{:}07{:}10.492 \dashrightarrow 00{:}07{:}12.704$  lung to a different organ such as

NOTE Confidence: 0.98789674

 $00:07:12.704 \longrightarrow 00:07:15.469$  the liver or the brain or your bones,

NOTE Confidence: 0.98789674

 $00:07:15.470 \longrightarrow 00:07:18.074$  then we take a different approach,

 $00:07:18.080 \longrightarrow 00:07:20.684$  which is then we need to use

NOTE Confidence: 0.98789674

 $00:07:20.684 \longrightarrow 00:07:21.428$  systemic therapy.

NOTE Confidence: 0.98789674

 $00:07:21.430 \longrightarrow 00:07:23.525$  That means something that gets

NOTE Confidence: 0.98789674

 $00:07:23.525 \longrightarrow 00:07:25.620$  into your bloodstream because every

NOTE Confidence: 0.98789674

 $00:07:25.693 \longrightarrow 00:07:27.829$  single cancer cell anywhere needs to

NOTE Confidence: 0.98789674

 $00{:}07{:}27.829 \dashrightarrow 00{:}07{:}30.209$  have a blood supply and therefore

NOTE Confidence: 0.98789674

00:07:30.210 --> 00:07:31.430 administering chemotherapy,

NOTE Confidence: 0.98789674

 $00:07:31.430 \longrightarrow 00:07:33.260$  or more recently,

NOTE Confidence: 0.98789674

 $00{:}07{:}33.260 \dashrightarrow 00{:}07{:}36.610$  all these advances in immunotherapy

NOTE Confidence: 0.98789674

 $00:07:36.610 \longrightarrow 00:07:41.370$  through the blood into the bloodstream,

NOTE Confidence: 0.98789674

 $00:07:41.370 \longrightarrow 00:07:43.375$  that way those therapeutic

NOTE Confidence: 0.98789674

 $00{:}07{:}43.375 \dashrightarrow 00{:}07{:}46.178$  drugs can reach all of the cancer

NOTE Confidence: 0.98789674

 $00:07:46.178 \longrightarrow 00:07:48.350$  cells that are in your body,

NOTE Confidence: 0.98789674

 $00{:}07{:}48.350 \dashrightarrow 00{:}07{:}49.910$  wherever they may be.

NOTE Confidence: 0.9845946

00:07:51.290 --> 00:07:52.845 Well, it's certainly good news

NOTE Confidence: 0.9845946

 $00:07:52.845 \longrightarrow 00:07:54.400$  that lung cancer,

 $00:07:54.400 \longrightarrow 00:07:56.500$  which is something that I think a

NOTE Confidence: 0.9845946

 $00{:}07{:}56.500 \dashrightarrow 00{:}07{:}58.795$  lot of people fear, is becoming

NOTE Confidence: 0.9845946

 $00:07:58.795 \longrightarrow 00:08:00.787$  a treatable disease and that

NOTE Confidence: 0.9845946

 $00:08:00.854 \longrightarrow 00:08:02.576$  there are all of these advances

NOTE Confidence: 0.9845946

 $00:08:02.576 \longrightarrow 00:08:04.885$  and I want to get into that.

NOTE Confidence: 0.9845946

 $00:08:04.885 \longrightarrow 00:08:07.580$  But first something that you said really

NOTE Confidence: 0.9845946

 $00:08:07.658 \longrightarrow 00:08:10.122$  struck a chord with me and has been

NOTE Confidence: 0.9845946

 $00:08:10.122 \longrightarrow 00:08:13.199$  the case with a lot of cancers and that is

NOTE Confidence: 0.9845946

 $00:08:13.200 \longrightarrow 00:08:15.050$  the earlier you find it,

NOTE Confidence: 0.9845946

 $00:08:15.050 \longrightarrow 00:08:16.522$  the lower the stage,

NOTE Confidence: 0.9845946

 $00:08:16.522 \longrightarrow 00:08:18.362$  the more treatable it is.

NOTE Confidence: 0.9845946

 $00:08:18.370 \longrightarrow 00:08:21.650$  So if you have a stage one lung cancer that's

NOTE Confidence: 0.9845946

 $00{:}08{:}21.726 \to 00{:}08{:}25.006$  more treatable than a stage four lung cancer,

NOTE Confidence: 0.9845946

 $00{:}08{:}25.010 \dashrightarrow 00{:}08{:}27.642$  and I was wondering if you could talk a

NOTE Confidence: 0.9845946

00:08:27.642 --> 00:08:30.019 little bit about advances that have

 $00:08:30.019 \longrightarrow 00:08:32.479$  been made in terms of screening

NOTE Confidence: 0.9845946

 $00:08:32.553 \longrightarrow 00:08:34.968$  that have helped us to find these

NOTE Confidence: 0.98480475

 $00:08:34.970 \longrightarrow 00:08:37.998$  lung cancers earlier?

NOTE Confidence: 0.98480475

00:08:38.000 --> 00:08:40.499 Screening is a hot topic now because

NOTE Confidence: 0.98480475

 $00{:}08{:}40.499 \dashrightarrow 00{:}08{:}42.590$  the US Preventive Services

NOTE Confidence: 0.98480475

00:08:42.590 --> 00:08:45.446 Task Force just issued a different

NOTE Confidence: 0.98480475

 $00:08:45.446 \longrightarrow 00:08:47.810$  recommendation or it altered their

NOTE Confidence: 0.98480475

 $00:08:47.810 \longrightarrow 00:08:50.498$  recommendation on screening for lung cancer.

NOTE Confidence: 0.98480475

 $00:08:50.500 \longrightarrow 00:08:54.379$  So previously, if you were aged 55 or older,

NOTE Confidence: 0.98480475

00:08:54.380 --> 00:08:57.566 or if you had a 30 pack year history

NOTE Confidence: 0.98480475

 $00:08:57.566 \longrightarrow 00:09:00.795$  of smoking and that means smoking one

NOTE Confidence: 0.98480475

00:09:00.795 --> 00:09:04.289 pack per day for roughly 30 years,

NOTE Confidence: 0.98480475

 $00:09:04.290 \longrightarrow 00:09:09.339$  then you would be eligible for a low dose

NOTE Confidence: 0.98480475

 $00:09:09.340 \dashrightarrow 00:09:12.460$  CT scan because you had a higher

NOTE Confidence: 0.98480475

 $00:09:12.460 \longrightarrow 00:09:15.571$  risk of lung cancer

NOTE Confidence: 0.98480475

 $00:09:15.571 \longrightarrow 00:09:18.747$  and being able to have a screening CT

00:09:18.750 --> 00:09:21.446 scan allows us to pick up

NOTE Confidence: 0.98480475

 $00:09:21.446 \longrightarrow 00:09:23.892$  things when they're very small and

NOTE Confidence: 0.98480475

 $00:09:23.892 \longrightarrow 00:09:26.911$  you don't have any symptoms and often

NOTE Confidence: 0.98480475

 $00:09:26.911 \longrightarrow 00:09:29.704$  help us to detect lung cancers when

NOTE Confidence: 0.98480475

 $00:09:29.704 \longrightarrow 00:09:32.470$  they are in a very early stage.

NOTE Confidence: 0.98480475

 $00:09:32.470 \longrightarrow 00:09:34.430$  So recently in March

 $00:09:36.000 \longrightarrow 00:09:38.130$  the US Preventive Services Task

NOTE Confidence: 0.98480475

 $00:09:38.130 \longrightarrow 00:09:39.834$  Force changed that recommendation

NOTE Confidence: 0.98480475

 $00:09:39.840 \longrightarrow 00:09:43.256$  to drop the age to 50 and for

NOTE Confidence: 0.98480475

 $00:09:43.256 \longrightarrow 00:09:45.678$  the pack year history to 20.

NOTE Confidence: 0.98480475

 $00{:}09{:}45.680 \dashrightarrow 00{:}09{:}49.008$  So the idea being, let's expand the

NOTE Confidence: 0.98480475

 $00:09:49.008 \longrightarrow 00:09:52.406$  population of people that are being screened.

 $00:09:53.553 \longrightarrow 00:09:56.220$  I think that our insurers

NOTE Confidence: 0.98480475

 $00{:}09{:}56.305 \dashrightarrow 00{:}10{:}00.218$  are catching up with that but

NOTE Confidence: 0.98480475

 $00:10:00.218 \longrightarrow 00:10:01.895$  the recommendations

NOTE Confidence: 0.98480475

 $00{:}10{:}01.985 \dashrightarrow 00{:}10{:}04.708$  have changed and I think that that's

00:10:04.708 --> 00:10:07.932 going to be very positive in terms

NOTE Confidence: 0.98480475

00:10:07.932 --> 00:10:11.010 of again being able to detect

NOTE Confidence: 0.98480475

 $00:10:11.010 \longrightarrow 00:10:13.747$  lung cancers in earlier stages where they

NOTE Confidence: 0.98480475

00:10:13.747 --> 00:10:16.531 might be able to undergo local therapy

NOTE Confidence: 0.98480475

 $00:10:16.531 \longrightarrow 00:10:19.620$  such as surgery or focused radiation.

NOTE Confidence: 0.9743017

00:10:20.660 --> 00:10:23.300 So important for people to

NOTE Confidence: 0.9743017

 $00{:}10{:}23.300 \dashrightarrow 00{:}10{:}25.942$  get screened because there are so

NOTE Confidence: 0.9743017

 $00:10:25.942 \longrightarrow 00:10:28.348$  many advances in terms of treatment.

NOTE Confidence: 0.9743017

 $00{:}10{:}28.350 \dashrightarrow 00{:}10{:}30.480$  Just one clarifying question though,

NOTE Confidence: 0.9743017

 $00:10:30.480 \longrightarrow 00:10:33.224$  and the other thing that

NOTE Confidence: 0.9743017

 $00:10:33.224 \longrightarrow 00:10:36.458$  a lot of people have now done,

NOTE Confidence: 0.9743017

 $00:10:36.460 \longrightarrow 00:10:38.200$  especially because we've seen

NOTE Confidence: 0.9743017

00:10:38.200 --> 00:10:40.810 advances in things like smoking

NOTE Confidence: 0.9743017

 $00:10:40.886 \longrightarrow 00:10:42.856$  cessation is to quit smoking.

NOTE Confidence: 0.9743017

 $00:10:42.860 \longrightarrow 00:10:46.028$  So let's suppose that you have a 20-25

NOTE Confidence: 0.9743017

00:10:46.028 --> 00:10:48.837 or thirty pack year history of smoking,

00:10:48.840 --> 00:10:50.268 but you just quit.

NOTE Confidence: 0.9743017

00:10:50.268 --> 00:10:53.686 You made it a New Year's

NOTE Confidence: 0.9743017

00:10:53.686 --> 00:10:56.880 resolution and you quit maybe a year ago,

NOTE Confidence: 0.9743017

 $00:10:56.880 \longrightarrow 00:10:58.336$  maybe six months ago.

NOTE Confidence: 0.9743017

00:10:58.336 --> 00:11:00.520 Are you still eligible for screening?

NOTE Confidence: 0.9743017

 $00:11:00.520 \longrightarrow 00:11:02.944$  Should you still be screened even

NOTE Confidence: 0.9743017

00:11:02.944 --> 00:11:04.922 though now you're officially a

NOTE Confidence: 0.9743017

 $00:11:04.922 \longrightarrow 00:11:06.704$  non smoker or a former smoker?

NOTE Confidence: 0.98861456

00:11:06.710 --> 00:11:09.139 Yes, if you have a history of

NOTE Confidence: 0.98861456

00:11:09.139 --> 00:11:11.069 smoking that's 25 pack years,

NOTE Confidence: 0.98861456

00:11:11.070 --> 00:11:13.618 even if it was ten years ago,

NOTE Confidence: 0.98861456

00:11:13.620 --> 00:11:15.440 you can still be eligible

NOTE Confidence: 0.98861456

 $00:11:15.440 \longrightarrow 00:11:17.260$  for this screening.

NOTE Confidence: 0.98861456

 $00{:}11{:}17.260 \dashrightarrow 00{:}11{:}20.044$  I think it's a really important

NOTE Confidence: 0.98861456

 $00:11:20.044 \longrightarrow 00:11:21.900$  message to folks that

00:11:21.900 --> 00:11:26.968 wherever you are in your course of

NOTE Confidence: 0.98861456

 $00{:}11{:}26.970 \dashrightarrow 00{:}11{:}28.625$  stopping smoking and it's certainly

NOTE Confidence: 0.98861456

00:11:28.625 --> 00:11:30.670 one of the hardest things to do,

NOTE Confidence: 0.98861456

 $00{:}11{:}30.670 \dashrightarrow 00{:}11{:}32.265$  it's always important to realize that

00:11:34.221 --> 00:11:36.003 stopping or quitting smoking is going

NOTE Confidence: 0.98861456

00:11:36.003 --> 00:11:38.057 to help you and help your lungs.

NOTE Confidence: 0.98861456

00:11:38.060 --> 00:11:41.798 It's going to help your overall

NOTE Confidence: 0.98861456

 $00:11:41.800 \longrightarrow 00:11:43.865$  health and you're going to do

NOTE Confidence: 0.98861456

 $00{:}11{:}43.865 \longrightarrow 00{:}11{:}46.075$  better than if you continue to smoke.

 $00:11:50.808 \longrightarrow 00:11:53.159$  There is data that even for folks who

NOTE Confidence: 0.98861456

 $00:11:53.864 \longrightarrow 00:11:56.328$  have smoked a lot over the course

NOTE Confidence: 0.98861456

 $00{:}11{:}56.328 \mathrel{--}{>} 00{:}11{:}58.785$  and maybe even 2 packs per day.

NOTE Confidence: 0.98861456

 $00:11:58.790 \longrightarrow 00:12:00.550$  We certainly had

NOTE Confidence: 0.98861456

 $00:12:00.550 \longrightarrow 00:12:03.231$  in our society a number of years

NOTE Confidence: 0.98861456

 $00:12:03.231 \longrightarrow 00:12:05.060$  where everybody smoked and that

NOTE Confidence: 0.98861456

 $00:12:05.060 \longrightarrow 00:12:06.884$  was really sort of run of the mill,

 $00:12:08.298 \longrightarrow 00:12:10.410$  that was a very common thing,

 $00:12:10.410 \longrightarrow 00:12:12.534$  so I think that it's really

NOTE Confidence: 0.98861456

 $00:12:12.534 \longrightarrow 00:12:14.280$  important that wherever you are,

NOTE Confidence: 0.98861456

 $00:12:14.280 \longrightarrow 00:12:15.708$  if you're a

NOTE Confidence: 0.98861456

00:12:15.708 --> 00:12:20.015 one pack a day smoker, 2 pack a day

00:12:21.720 --> 00:12:25.059 or you smoke a couple of cigarettes a week,

NOTE Confidence: 0.98861456

 $00{:}12{:}25.060 \dashrightarrow 00{:}12{:}27.762$  I think that stopping smoking

NOTE Confidence: 0.98861456

 $00:12:27.762 \longrightarrow 00:12:31.139$  can really help you and we do have a

NOTE Confidence: 0.98861456

00:12:31.139 --> 00:12:33.219 smoking cessation clinic here at Yale

NOTE Confidence: 0.98861456

 $00{:}12{:}33.220 \dashrightarrow 00{:}12{:}34.522$  that's incredibly successful.

NOTE Confidence: 0.98861456

 $00:12:34.522 \longrightarrow 00:12:37.560$  There have been so many advances that

NOTE Confidence: 0.98861456

00:12:37.630 --> 00:12:39.894 I can't even keep track.

NOTE Confidence: 0.98861456

 $00{:}12{:}39.900 \dashrightarrow 00{:}12{:}43.239$  It was just the patch and the lozenge.

NOTE Confidence: 0.98861456

 $00:12:43.240 \longrightarrow 00:12:45.586$  And now there's so many different

NOTE Confidence: 0.98861456

 $00{:}12{:}45.586 \dashrightarrow 00{:}12{:}47.812$  options to help people stop and

NOTE Confidence: 0.98861456

 $00:12:47.812 \longrightarrow 00:12:50.156$  and being able to do some of this

NOTE Confidence: 0.98861456

00:12:50.232 --> 00:12:52.468 through Televisit consultation

00:12:52.470 --> 00:12:54.750 either through video or phone,

 $00:12:56.650 \longrightarrow 00:12:59.405$  can allow people to access this

NOTE Confidence: 0.98861456

 $00:12:59.405 \longrightarrow 00:13:02.160$  kind of help and support

NOTE Confidence: 0.98861456

00:13:02.160 --> 00:13:03.710 to really improve their health,

 $00:13:04.320 \longrightarrow 00:13:06.348$  It is important to quit smoking and talk

NOTE Confidence: 0.98372304

 $00:13:06.348 \longrightarrow 00:13:08.587$  to your doctor or call a quit

NOTE Confidence: 0.98372304

 $00:13:08.587 \longrightarrow 00:13:10.498$  line to get the help you need.

NOTE Confidence: 0.98372304

 $00:13:10.500 \longrightarrow 00:13:12.240$  We're going to take a short

NOTE Confidence: 0.98372304

 $00:13:12.240 \longrightarrow 00:13:13.900$  break for a medical minute.

NOTE Confidence: 0.98372304

00:13:13.900 --> 00:13:16.014 Please stay tuned to learn more about

NOTE Confidence: 0.98372304

00:13:16.014 --> 00:13:18.229 small cell lung cancer with my guest

NOTE Confidence: 0.98372304

00:13:18.230 --> 00:13:19.160 Doctor Anne Chiang.

NOTE Confidence: 0.8771455

 $00{:}13{:}19.890 \dashrightarrow 00{:}13{:}22.475$  Funding for Yale Cancer Answers

NOTE Confidence: 0.8771455

 $00:13:22.475 \longrightarrow 00:13:25.563$  comes from AstraZeneca, working to

NOTE Confidence: 0.8771455

00:13:25.563 --> 00:13:28.440 eliminate cancer as a cause of death.

NOTE Confidence: 0.8771455

 $00{:}13{:}28.440 \dashrightarrow 00{:}13{:}32.308$  Learn more at a strazeneca-us.com.

NOTE Confidence: 0.8771455

 $00:13:32.310 \longrightarrow 00:13:33.940$  It's estimated that over 240,000

 $00:13:33.940 \longrightarrow 00:13:36.440$  men in the US will be diagnosed

NOTE Confidence: 0.8771455

 $00{:}13{:}36.440 \to 00{:}13{:}38.450$  with prostate cancer this year,

NOTE Confidence: 0.8771455

 $00:13:38.450 \longrightarrow 00:13:40.616$  with over 3000 new cases being

NOTE Confidence: 0.8771455

00:13:40.616 --> 00:13:42.060 identified here in Connecticut,

NOTE Confidence: 0.8771455

 $00:13:42.060 \longrightarrow 00:13:44.232$  one in eight American men will

NOTE Confidence: 0.8771455

 $00:13:44.232 \longrightarrow 00:13:45.680$  develop prostate cancer in

NOTE Confidence: 0.8771455

 $00:13:45.752 \longrightarrow 00:13:47.467$  the course of his lifetime.

NOTE Confidence: 0.8771455

 $00{:}13{:}47.470 \dashrightarrow 00{:}13{:}49.350$  Major advances in the detection

NOTE Confidence: 0.8771455

 $00{:}13{:}49.350 \rightarrow 00{:}13{:}51.230$  and treatment of prostate cancer

NOTE Confidence: 0.8771455

 $00{:}13{:}51.296 \dashrightarrow 00{:}13{:}52.660$  have dramatically decreased the

NOTE Confidence: 0.8771455

 $00:13:52.660 \longrightarrow 00:13:55.121$  number of men who die from the

NOTE Confidence: 0.8771455

 $00{:}13{:}55.121 \dashrightarrow 00{:}13{:}56.886$  disease. Screening can be performed

NOTE Confidence: 0.8771455

 $00{:}13{:}56.886 \to 00{:}13{:}59.080$  quickly and easily in a physician's

NOTE Confidence: 0.8771455

00:13:59.080 --> 00:14:01.030 office using two simple tests.

NOTE Confidence: 0.8771455

 $00{:}14{:}01.030 \dashrightarrow 00{:}14{:}04.019$  A physical exam and a blood test.

 $00:14:04.020 \longrightarrow 00:14:06.535$  Clinical trials are currently underway

NOTE Confidence: 0.8771455

 $00:14:06.535 \longrightarrow 00:14:08.547$  at federally designated Comprehensive

NOTE Confidence: 0.8771455

 $00{:}14{:}08.547 \dashrightarrow 00{:}14{:}10.746$  cancer centers such as Yale Cancer

NOTE Confidence: 0.8771455

00:14:10.746 --> 00:14:12.990 Center and Smilow Cancer Hospital,

NOTE Confidence: 0.8771455

 $00:14:12.990 \longrightarrow 00:14:15.120$  where doctors are also using

NOTE Confidence: 0.8771455

00:14:15.120 --> 00:14:16.398 the Artemis machine,

NOTE Confidence: 0.8771455

 $00{:}14{:}16.400 \dashrightarrow 00{:}14{:}18.108$  which enables targeted biopsies

NOTE Confidence: 0.8771455

 $00:14:18.108 \longrightarrow 00:14:19.389$  to be performed.

NOTE Confidence: 0.8771455

00:14:19.390 --> 00:14:22.065 More information is available at

NOTE Confidence: 0.8771455

 $00:14:22.065 \longrightarrow 00:14:23.670$  yalecancercenter.org. You're listening

NOTE Confidence: 0.8771455

 $00:14:23.670 \longrightarrow 00:14:25.629$  to Connecticut Public Radio.

NOTE Confidence: 0.8771455

 $00:14:25.630 \longrightarrow 00:14:25.990$  Welcome

NOTE Confidence: 0.9778411

00:14:25.990 --> 00:14:27.770 back to Yale Cancer Answers.

NOTE Confidence: 0.9778411

 $00{:}14{:}27.770 \dashrightarrow 00{:}14{:}30.641$  This is doctor Anees Chagpar and I'm

NOTE Confidence: 0.9778411

00:14:30.641 --> 00:14:33.455 joined tonight by my guest Doctor Anne Chiang.

NOTE Confidence: 0.9778411

 $00:14:33.460 \longrightarrow 00:14:35.072$  We're discussing recent treatment

00:14:35.072 --> 00:14:37.490 advances in small cell lung cancer

NOTE Confidence: 0.9778411

 $00{:}14{:}37.554 \dashrightarrow 00{:}14{:}39.626$  and right before the break you

NOTE Confidence: 0.9778411

 $00:14:39.626 \longrightarrow 00:14:42.004$  were telling us about the fact that

NOTE Confidence: 0.9778411

 $00:14:42.004 \longrightarrow 00:14:43.784$  there have been really exciting

NOTE Confidence: 0.9778411

 $00{:}14{:}43.784 \dashrightarrow 00{:}14{:}46.348$  advances both in small cell as well

NOTE Confidence: 0.9778411

 $00:14:46.348 \longrightarrow 00:14:49.408$  as in non-small cell lung cancer

NOTE Confidence: 0.9778411

00:14:49.410 --> 00:14:51.150 that have really affected outcomes

NOTE Confidence: 0.9778411

 $00:14:51.150 \longrightarrow 00:14:52.890$  for patients with these diseases.

NOTE Confidence: 0.9778411

 $00:14:52.890 \longrightarrow 00:14:55.548$  So tell us more about some

NOTE Confidence: 0.9778411

00:14:55.548 --> 00:14:57.320 of these exciting advances.

 $00{:}14{:}58.110 \dashrightarrow 00{:}15{:}00.480$  I'd love to. This is a really exciting

NOTE Confidence: 0.9476049

 $00:15:00.480 \longrightarrow 00:15:02.060$  time for lung cancer.

NOTE Confidence: 0.9476049

 $00:15:02.060 \longrightarrow 00:15:05.615$  I remember back to when I started at Yale,

NOTE Confidence: 0.9476049

 $00{:}15{:}05.620 --> 00{:}15{:}07.990$  which was almost 10 years ago,

NOTE Confidence: 0.9476049

00:15:07.990 --> 00:15:11.772 and I put my first patient or one of my first

NOTE Confidence: 0.9476049

 $00:15:11.772 \longrightarrow 00:15:15.097$  patients on a clinical trial and at that time

00:15:15.100 --> 00:15:17.858 the standard of care was chemotherapy,

NOTE Confidence: 0.9476049

 $00:15:17.860 \longrightarrow 00:15:20.902$  and in this case we were looking at treating

NOTE Confidence: 0.9476049

00:15:20.902 --> 00:15:23.114 this patient with immunotherapy

NOTE Confidence: 0.9476049

 $00:15:23.114 \longrightarrow 00:15:26.160$  and not doing chemotherapy first.

NOTE Confidence: 0.9476049

 $00:15:26.160 \longrightarrow 00:15:28.220$  And he did extremely well.

NOTE Confidence: 0.9476049

00:15:28.220 --> 00:15:31.172 And in fact, I saw him a couple of

NOTE Confidence: 0.9476049

 $00:15:31.172 \longrightarrow 00:15:34.281$  weeks ago and he has been off trial

NOTE Confidence: 0.9476049

 $00:15:34.281 \longrightarrow 00:15:37.462$  with no treatment for the past eight

NOTE Confidence: 0.9476049

 $00:15:37.462 \longrightarrow 00:15:40.366$  years and he is contemplating retirement

NOTE Confidence: 0.9476049

 $00:15:40.370 \longrightarrow 00:15:42.800$  and he's doing just incredibly well.

 $00:15:44.464 \longrightarrow 00:15:47.829$  And that still sends shivers down my spine and I

NOTE Confidence: 0.9476049

00:15:47.829 --> 00:15:50.580 know that it's not every single patient

NOTE Confidence: 0.9476049

 $00:15:50.580 \longrightarrow 00:15:53.325$  that has that kind of result.

NOTE Confidence: 0.9476049

 $00:15:53.330 \longrightarrow 00:15:56.426$  But I think the more that we can learn

NOTE Confidence: 0.9476049

00:15:56.426 --> 00:15:59.100 through studying and through biology,

NOTE Confidence: 0.9476049

 $00:15:59.100 \longrightarrow 00:16:00.030$  through clinical trials,

 $00:16:00.030 \longrightarrow 00:16:02.825$  our aim is really to do the best for

NOTE Confidence: 0.9476049

 $00{:}16{:}02.825 \dashrightarrow 00{:}16{:}05.065$  our patients and push that edge as far

NOTE Confidence: 0.9476049

 $00:16:05.131 \longrightarrow 00:16:07.331$  as it can go in terms of how they do.

NOTE Confidence: 0.9476049

 $00:16:57.840 \longrightarrow 00:17:02.952$  One of the trials that I'm a national

NOTE Confidence: 0.9476049

 $00:17:02.960 \longrightarrow 00:17:04.816$  Investigator on spearheading

NOTE Confidence: 0.9476049

 $00:17:04.816 \longrightarrow 00:17:08.140$  is a trial called Insigna

NOTE Confidence: 0.9476049

00:17:08.140 --> 00:17:10.966 and it's run through our cooperative groups,

NOTE Confidence: 0.9476049

 $00:17:10.970 \longrightarrow 00:17:14.458$  that's groups that

NOTE Confidence: 0.9476049

 $00:17:14.460 \longrightarrow 00:17:16.950$  help to do research, clinical

NOTE Confidence: 0.9476049

 $00{:}17{:}16.950 \dashrightarrow 00{:}17{:}18.942$  research in the communities.

NOTE Confidence: 0.9476049

 $00:17:18.950 \longrightarrow 00:17:21.938$  This trial is open at about

NOTE Confidence: 0.9476049

 $00:17:21.938 \longrightarrow 00:17:23.432$  850 different centers,

NOTE Confidence: 0.9476049

 $00:17:23.440 \longrightarrow 00:17:26.896$  we're looking for 850 patients to

NOTE Confidence: 0.9476049

 $00:17:26.896 \longrightarrow 00:17:30.978$  enroll on this trial and we're trying

NOTE Confidence: 0.9476049

00:17:30.978 --> 00:17:35.400 to understand for PD L1 positive or for

00:17:35.400 --> 00:17:38.202 patients who have this marker of

NOTE Confidence: 0.9476049

 $00{:}17{:}38.202 \dashrightarrow 00{:}17{:}42.393$  PDL one if they are treated with

NOTE Confidence: 0.9476049

 $00:17:42.393 \longrightarrow 00:17:45.353$  either immunotherapy upfront or

NOTE Confidence: 0.9476049

00:17:45.353 --> 00:17:48.940 immunotherapy combined with chemotherapy,

NOTE Confidence: 0.9476049

 $00:17:48.940 \longrightarrow 00:17:50.710$  which group will do better

NOTE Confidence: 0.9476049

 $00:17:50.710 \longrightarrow 00:17:52.699$  and then with those patients

NOTE Confidence: 0.9476049

 $00:17:52.699 \longrightarrow 00:17:54.559$  who are treated with immunotherapy

NOTE Confidence: 0.9476049

 $00:17:54.559 \longrightarrow 00:17:56.270$  alone if they progress,

NOTE Confidence: 0.9476049

 $00:17:56.270 \longrightarrow 00:17:58.950$  can we then add chemo to the immunotherapy

NOTE Confidence: 0.9476049

 $00:17:58.950 \longrightarrow 00:18:01.500$  to sort of boost the immune system?

NOTE Confidence: 0.9476049

 $00{:}18{:}01.500 \dashrightarrow 00{:}18{:}03.593$  And at the same time we're going

NOTE Confidence: 0.9476049

 $00:18:03.593 \longrightarrow 00:18:05.863$  to be using the tissue and the

NOTE Confidence: 0.9476049

 $00:18:05.863 \longrightarrow 00:18:08.705$  science that we can gather to try to

NOTE Confidence: 0.9476049

 $00:18:08.705 \longrightarrow 00:18:11.147$  understand if there are biomarkers or

NOTE Confidence: 0.9476049

 $00:18:11.147 \longrightarrow 00:18:13.418$  signatures that can help us understand

NOTE Confidence: 0.9476049

 $00{:}18{:}13.418 \dashrightarrow 00{:}18{:}15.590$  which people will benefit and which

 $00:18:15.654 \longrightarrow 00:18:17.556$  people have less of a benefit.

NOTE Confidence: 0.9476049

00:18:17.560 --> 00:18:20.409 that's a really exciting trial that is ongoing, 00:18:20.744 --> 00:18:23.750 we're about 40% of the way through on that,

NOTE Confidence: 0.9476049

 $00:18:23.750 \longrightarrow 00:18:26.414$  and I think that you know there are

NOTE Confidence: 0.9819967

 $00:18:26.420 \longrightarrow 00:18:28.814$  thousands of

NOTE Confidence: 0.9819967

00:18:28.814 --> 00:18:30.429 immunotherapy trials in cancer right now,

NOTE Confidence: 0.9819967

 $00:18:30.430 \longrightarrow 00:18:32.902$  but I think this is one that

NOTE Confidence: 0.9819967

00:18:32.902 --> 00:18:34.998 will really help us to understand

NOTE Confidence: 0.9819967

 $00{:}18{:}34.998 \dashrightarrow 00{:}18{:}37.104$  what's the right thing to do

NOTE Confidence: 0.9819967

00:18:37.110 --> 00:18:40.116 up front.

NOTE Confidence: 0.9819967

 $00:18:40.120 \longrightarrow 00:18:42.240$  We talk on this show

NOTE Confidence: 0.9819967

 $00:18:42.240 \longrightarrow 00:18:44.458$  all the time about immunotherapy.

NOTE Confidence: 0.9819967

 $00:18:44.460 \longrightarrow 00:18:46.335$  And it sounds like particularly

NOTE Confidence: 0.9819967

 $00{:}18{:}46.335 \mathrel{--}{>} 00{:}18{:}48.598$  giving your an ecdotal case with your

NOTE Confidence: 0.9819967

00:18:48.598 --> 00:18:50.536 patient who's now nine years out,

NOTE Confidence: 0.9819967

 $00:18:50.540 \longrightarrow 00:18:52.072$  it sounds like immunotherapy

 $00:18:52.072 \longrightarrow 00:18:54.819$  really does have a role or a

NOTE Confidence: 0.9819967

 $00{:}18{:}54.819 \dashrightarrow 00{:}18{:}56.679$  potential role in lung cancer.

NOTE Confidence: 0.9819967

00:18:56.680 --> 00:18:57.751 With your trial,

NOTE Confidence: 0.9819967

00:18:57.751 --> 00:19:01.290 is it open to non small cell lung cancer,

NOTE Confidence: 0.9819967

 $00:19:01.290 \longrightarrow 00:19:04.354$  small cell lung cancer, or any lung cancer?

NOTE Confidence: 0.953572

 $00:19:05.200 \longrightarrow 00:19:08.737$  So that trial is open for non small cell

NOTE Confidence: 0.953572

00:19:08.737 --> 00:19:12.643 lung cancer and it's for patients who have

NOTE Confidence: 0.953572

 $00:19:12.643 \longrightarrow 00:19:16.252$  stage four disease and who have a tumor

NOTE Confidence: 0.953572

 $00:19:16.252 \longrightarrow 00:19:19.687$  that has a positive marker for PDL 1,

NOTE Confidence: 0.953572

 $00{:}19{:}19.687 \dashrightarrow 00{:}19{:}22.441$  which is an important molecule

NOTE Confidence: 0.953572

 $00:19:22.441 \longrightarrow 00:19:26.130$  in the signaling for immunotherapy

NOTE Confidence: 0.953572

 $00:19:26.130 \longrightarrow 00:19:29.567$  in terms of small cell lung cancer,

NOTE Confidence: 0.953572

 $00:19:29.570 \longrightarrow 00:19:32.216$  we have a number of clinical

NOTE Confidence: 0.953572

 $00:19:32.216 \longrightarrow 00:19:34.970$  trials also that are available,

NOTE Confidence: 0.953572

 $00:19:34.970 \longrightarrow 00:19:39.425$  and I think that the story for

 $00:19:39.425 \longrightarrow 00:19:43.755$  small cell is that chemo plus immunotherapy

NOTE Confidence: 0.953572

 $00:19:43.755 \longrightarrow 00:19:47.928$  has been

NOTE Confidence: 0.953572

 $00:19:47.930 \longrightarrow 00:19:49.845$  approved in

NOTE Confidence: 0.953572

 $00:19:49.845 \longrightarrow 00:19:51.760$  the past couple of years.

NOTE Confidence: 0.953572

 $00:19:51.760 \longrightarrow 00:19:53.675$  That's how the landscape

NOTE Confidence: 0.953572

 $00:19:53.675 \longrightarrow 00:19:55.590$  of small cell has changed.

NOTE Confidence: 0.953572

 $00:19:55.590 \longrightarrow 00:19:58.062$  It was just previously treated with

NOTE Confidence: 0.953572

 $00:19:58.062 \longrightarrow 00:20:00.790$  chemotherapy and just in the past couple

NOTE Confidence: 0.953572

 $00{:}20{:}00.790 \dashrightarrow 00{:}20{:}03.630$  of years we now treat with chemo,

NOTE Confidence: 0.953572

 $00:20:03.630 \longrightarrow 00:20:04.396$  plus immunotherapy.

NOTE Confidence: 0.953572

 $00:20:04.396 \longrightarrow 00:20:07.460$  And then the question is what happens after?

NOTE Confidence: 0.953572

00:20:07.460 --> 00:20:09.380 If that doesn't work anymore?

NOTE Confidence: 0.953572

 $00:20:09.380 \longrightarrow 00:20:12.584$  And I think we have a number of different

NOTE Confidence: 0.953572

 $00:20:12.584 \longrightarrow 00:20:15.505$  clinical trials that are available for that,

NOTE Confidence: 0.953572

 $00:20:15.510 \longrightarrow 00:20:17.845$  and we're trying to really

NOTE Confidence: 0.953572

00:20:17.845 --> 00:20:19.713 understand the biology behind

 $00:20:20.486 \longrightarrow 00:20:23.167$  why people respond or why they

NOTE Confidence: 0.953572

 $00{:}20{:}23.167 \dashrightarrow 00{:}20{:}26.069$  don't respond and in small cell it's

NOTE Confidence: 0.953572

 $00:20:26.069 \longrightarrow 00:20:28.247$  typically a tumor where there's

NOTE Confidence: 0.953572

 $00:20:28.247 \longrightarrow 00:20:30.627$  less tissue available to test,

NOTE Confidence: 0.953572

 $00:20:30.630 \longrightarrow 00:20:32.700$  and so we've put together

NOTE Confidence: 0.953572

 $00:20:32.700 \longrightarrow 00:20:34.966$  a really great team here for

NOTE Confidence: 0.953572

 $00:20:34.966 \longrightarrow 00:20:36.996$  studying the science that includes

00:20:39.170 --> 00:20:41.095 PhD scientists working

NOTE Confidence: 0.953572

 $00{:}20{:}41.095 \dashrightarrow 00{:}20{:}43.819$  on lung cancer as well as myself.

NOTE Confidence: 0.953572

 $00:20:43.820 \longrightarrow 00:20:45.017$  And, you know,

NOTE Confidence: 0.953572

 $00{:}20{:}45.017 \dashrightarrow 00{:}20{:}49.054$  I think it would be too hard to go into

NOTE Confidence: 0.953572

 $00:20:49.054 \longrightarrow 00:20:52.280$  all of the details here,

NOTE Confidence: 0.953572

 $00{:}20{:}52.280 \dashrightarrow 00{:}20{:}54.772$  but I think we're going to learn

NOTE Confidence: 0.953572

 $00{:}20{:}54.772 \dashrightarrow 00{:}20{:}57.825$  a lot about how we can explore the

NOTE Confidence: 0.953572

00:20:57.825 --> 00:21:00.274 biology of small cell in order

NOTE Confidence: 0.953572

 $00:21:00.274 \longrightarrow 00:21:02.579$  to find out vulnerabilities in

 $00:21:02.579 \longrightarrow 00:21:04.835$  order to target this disease.

00:21:05.240 --> 00:21:07.265 It sounds like you

NOTE Confidence: 0.9855222

00:21:07.270 --> 00:21:10.098 know, across the board in lung cancer,

NOTE Confidence: 0.9855222

 $00:21:10.100 \longrightarrow 00:21:12.494$  whether you've got small cell or

NOTE Confidence: 0.9855222

 $00:21:12.494 \longrightarrow 00:21:14.960$  whether you've got non small cell.

NOTE Confidence: 0.9855222

 $00:21:14.960 \longrightarrow 00:21:17.564$  It sounds like immunotherapy is increasingly

NOTE Confidence: 0.9855222

 $00:21:17.564 \longrightarrow 00:21:20.496$  becoming part of the arsenal that your

NOTE Confidence: 0.9855222

 $00:21:20.496 \longrightarrow 00:21:23.114$  doctor may use to treat your disease.

NOTE Confidence: 0.9855222

00:21:23.120 --> 00:21:26.011 And that really has made a

NOTE Confidence: 0.9855222

 $00:21:26.011 \longrightarrow 00:21:28.920$  difference now, and is that the case

NOTE Confidence: 0.9855222

 $00:21:28.920 \longrightarrow 00:21:31.789$  only for people who express PDL one?

NOTE Confidence: 0.9855222

 $00:21:31.790 \longrightarrow 00:21:35.006$  We've talked on this show before

NOTE Confidence: 0.9855222

 $00{:}21{:}35.006 \dashrightarrow 00{:}21{:}37.577$  about checkpoint inhibitors like PDL one.

NOTE Confidence: 0.9855222

 $00:21:37.580 \longrightarrow 00:21:40.324$  So is it the case that people who

NOTE Confidence: 0.9855222

 $00:21:40.324 \longrightarrow 00:21:42.429$  present with metastatic lung cancer,

NOTE Confidence: 0.9855222

00:21:42.429 --> 00:21:45.558 stage four, that they should be having

 $00:21:45.641 \longrightarrow 00:21:48.233$  their tumors checked for that marker

NOTE Confidence: 0.9855222

 $00:21:48.233 \longrightarrow 00:21:50.465$  and then treated with immunotherapy

NOTE Confidence: 0.9855222

 $00:21:50.465 \longrightarrow 00:21:53.435$  or is immunotherapy something that

NOTE Confidence: 0.9855222

 $00:21:53.440 \longrightarrow 00:21:56.597$  your doctor may use regardless?

NOTE Confidence: 0.95391256

 $00:21:56.600 \longrightarrow 00:22:00.569$  For non small cell lung cancer you

NOTE Confidence: 0.95391256

 $00{:}22{:}00.569 \dashrightarrow 00{:}22{:}03.808$  definitely need to have your tumor checked.

NOTE Confidence: 0.95391256

 $00{:}22{:}03.810 \dashrightarrow 00{:}22{:}06.967$  If you have high levels of PDL

NOTE Confidence: 0.95391256

00:22:06.967 --> 00:22:09.990 one so greater than 50% then you

NOTE Confidence: 0.95391256

 $00{:}22{:}09.990 \dashrightarrow 00{:}22{:}12.650$  may be eligible to be treated

NOTE Confidence: 0.95391256

 $00:22:12.650 \longrightarrow 00:22:15.090$  with just immunotherapy alone.

NOTE Confidence: 0.95391256

 $00{:}22{:}15.090 \mathrel{--}{>} 00{:}22{:}17.880$  Otherwise you really need to be

NOTE Confidence: 0.95391256

 $00:22:17.880 \longrightarrow 00:22:20.790$  treated with a combination of chemo

NOTE Confidence: 0.95391256

 $00:22:20.790 \longrightarrow 00:22:23.195$  and immunotherapy. For small cell, it is different.

 $00{:}22{:}24.595 \dashrightarrow 00{:}22{:}26.455$  There's very little PDL one

NOTE Confidence: 0.95391256

 $00:22:26.460 \longrightarrow 00:22:29.226$  expression to start with and

NOTE Confidence: 0.95391256

00:22:29.226 --> 00:22:32.500 for the trials that have been done,

 $00:22:32.500 \longrightarrow 00:22:37.396$  they've looked at all comers

NOTE Confidence: 0.95391256

 $00:22:37.400 \longrightarrow 00:22:39.983$  so it doesn't matter if you have PDL one

NOTE Confidence: 0.95391256

00:22:39.983 --> 00:22:42.244 expression or not because it's so low anyway,

NOTE Confidence: 0.95391256

 $00:22:42.250 \longrightarrow 00:22:44.168$  but all of the small cell patients

NOTE Confidence: 0.95391256

00:22:44.168 --> 00:22:45.634 that are diagnosed are treated

NOTE Confidence: 0.95391256

 $00:22:45.634 \longrightarrow 00:22:46.806$  with chemo plus immuno.

NOTE Confidence: 0.92563957

 $00:22:48.470 \longrightarrow 00:22:51.302$  It is interesting how that kind

NOTE Confidence: 0.92563957

 $00:22:51.302 \longrightarrow 00:22:54.000$  of plays out between the

NOTE Confidence: 0.92563957

00:22:54.000 --> 00:22:55.568 two disease types.

NOTE Confidence: 0.92563957

 $00:22:55.568 \longrightarrow 00:22:59.623$  So tell us a little bit more about other

NOTE Confidence: 0.92563957

00:22:59.623 --> 00:23:02.308 advances that have occurred?

NOTE Confidence: 0.92563957

 $00:23:02.308 \longrightarrow 00:23:05.651$  Before the break you were telling us

NOTE Confidence: 0.92563957

00:23:05.651 --> 00:23:08.291 about an alphabet soup of markers,

NOTE Confidence: 0.92563957

 $00:23:08.291 \longrightarrow 00:23:11.057$  things like EGFR and others.

NOTE Confidence: 0.92563957

 $00:23:11.060 \longrightarrow 00:23:12.440$  ALK, for example.

NOTE Confidence: 0.92563957

 $00:23:12.440 \longrightarrow 00:23:15.670$  How have these really changed the landscape?

 $00{:}23{:}15.670 --> 00{:}23{:}17.656 \ {\rm Are \ oncologists}$ 

NOTE Confidence: 0.92563957

00:23:17.656 --> 00:23:21.387 using them to kind of target their

NOTE Confidence: 0.92563957

 $00:23:21.387 \longrightarrow 00:23:24.937$  therapies to personalize things as it were?

NOTE Confidence: 0.87697756

 $00:23:26.770 \longrightarrow 00:23:29.110$  Great question. So as I was

NOTE Confidence: 0.87697756

 $00{:}23{:}29.110 \dashrightarrow 00{:}23{:}31.200$  talking about before the break,

NOTE Confidence: 0.87697756

00:23:31.200 --> 00:23:33.573 if you for example have an EGFR

NOTE Confidence: 0.87697756

00:23:33.573 --> 00:23:36.112 mutation which EGFR stands for

NOTE Confidence: 0.87697756

 $00:23:36.112 \longrightarrow 00:23:38.048$  epidermal growth factor receptor,

NOTE Confidence: 0.87697756

 $00:23:38.050 \longrightarrow 00:23:40.826$  I think that the key is that

NOTE Confidence: 0.87697756

 $00:23:40.826 \longrightarrow 00:23:43.441$  what we found over the years is

NOTE Confidence: 0.87697756

 $00:23:43.441 \longrightarrow 00:23:46.312$  that if you have a mutation in

NOTE Confidence: 0.87697756

 $00:23:46.312 \longrightarrow 00:23:49.180$  that you really respond to

NOTE Confidence: 0.87697756

 $00{:}23{:}49.180 \dashrightarrow 00{:}23{:}53.008$  taking that EGFR directed the rapy.

NOTE Confidence: 0.87697756

 $00:23:53.010 \longrightarrow 00:23:54.183$  In this case,

NOTE Confidence: 0.87697756

00:23:54.183 --> 00:23:56.529 it's a drug called osimertinib

 $00{:}23{:}58.875 \dashrightarrow 00{:}24{:}01.550$  and you should do that off the bat

 $00:24:01.550 \longrightarrow 00:24:03.704$  if you have stage four disease.

NOTE Confidence: 0.87697756

 $00{:}24{:}03.710 \dashrightarrow 00{:}24{:}06.279$  If you have stage one disease or

NOTE Confidence: 0.87697756

00:24:06.279 --> 00:24:09.013 stage two disease or you've had or

NOTE Confidence: 0.87697756

00:24:09.013 --> 00:24:11.347 stage three that you've had surgery,

NOTE Confidence: 0.87697756

 $00{:}24{:}11.350 \dashrightarrow 00{:}24{:}14.254$  there has been a very new advance in

NOTE Confidence: 0.87697756

 $00:24:14.254 \longrightarrow 00:24:17.040$  the past year and it was

NOTE Confidence: 0.87697756

00:24:17.040 --> 00:24:19.750 led by Doctor Roy Herbst of Yale,

NOTE Confidence: 0.87697756

 $00:24:19.750 \longrightarrow 00:24:21.695$  our team that basically

NOTE Confidence: 0.87697756

 $00:24:21.695 \longrightarrow 00:24:23.640$  says that after you

NOTE Confidence: 0.87697756

 $00:24:23.640 \longrightarrow 00:24:25.460$  have that surgery,

NOTE Confidence: 0.87697756

 $00:24:25.460 \longrightarrow 00:24:28.008$  you benefit from taking that oral therapy.

NOTE Confidence: 0.87697756

 $00{:}24{:}32.380 \dashrightarrow 00{:}24{:}34.462$  And I think it's important also

NOTE Confidence: 0.87697756

 $00:24:34.462 \longrightarrow 00:24:36.380$  to mention that these trials,

NOTE Confidence: 0.87697756

 $00:24:36.380 \longrightarrow 00:24:38.200$  such as the ADURO trial,

NOTE Confidence: 0.87697756

 $00:24:38.200 \longrightarrow 00:24:40.370$  were offered not only in

00:24:40.370 --> 00:24:42.929 our main academic campus,

NOTE Confidence: 0.87697756

 $00:24:42.930 \longrightarrow 00:24:43.881$  in New Haven,

NOTE Confidence: 0.87697756

00:24:43.881 --> 00:24:46.100 but also in all of our Smilow

NOTE Confidence: 0.87697756

 $00:24:46.176 \longrightarrow 00:24:48.386$  care centers across the state.

NOTE Confidence: 0.87697756

 $00:24:48.390 \longrightarrow 00:24:51.294$  And we have 15 of them,

NOTE Confidence: 0.87697756

 $00:24:51.300 \longrightarrow 00:24:53.826$  so we've been able to

NOTE Confidence: 0.87697756

 $00:24:53.830 \longrightarrow 00:24:57.365$  allow patients who are in

NOTE Confidence: 0.87697756

00:24:57.370 --> 00:24:59.800 all parts of the state participate

NOTE Confidence: 0.87697756

 $00:24:59.800 \longrightarrow 00:25:01.996$  in these types of clinical

NOTE Confidence: 0.87697756

 $00:25:01.996 \longrightarrow 00:25:03.988$  trials that can really,

NOTE Confidence: 0.87697756

 $00:25:03.990 \longrightarrow 00:25:06.030$  really give access to cutting

NOTE Confidence: 0.87697756

00:25:06.030 --> 00:25:09.116 edge drugs or to help to advance

NOTE Confidence: 0.87697756

00:25:09.116 --> 00:25:11.036 science for all patients.

NOTE Confidence: 0.9865072

 $00:25:11.040 \longrightarrow 00:25:14.127$  And that's the case across the

NOTE Confidence: 0.9865072

 $00:25:14.127 \longrightarrow 00:25:16.605$  country, that many of these

NOTE Confidence: 0.9865072

00:25:16.605 --> 00:25:19.184 large trials are offered at

 $00{:}25{:}19.184 \dashrightarrow 00{:}25{:}21.992$  academic centers that are offered at

NOTE Confidence: 0.9865072

 $00{:}25{:}21.992 \dashrightarrow 00{:}25{:}24.884$  community centers and that really people

NOTE Confidence: 0.9865072

 $00:25:24.884 \longrightarrow 00:25:27.698$  should talk to their doctor because

NOTE Confidence: 0.9865072

 $00:25:27.700 \longrightarrow 00:25:29.302$  trials, whether they were led by

NOTE Confidence: 0.9865072

 $00{:}25{:}29.302 \dashrightarrow 00{:}25{:}31.587$  Yale or led by investigators at

NOTE Confidence: 0.9865072

 $00:25:31.587 \longrightarrow 00:25:33.507$  other centers are often available

NOTE Confidence: 0.9865072

00:25:33.507 --> 00:25:35.380 for patients across the nation.

NOTE Confidence: 0.9865072

 $00:25:35.380 \longrightarrow 00:25:36.382$  Isn't that right?

NOTE Confidence: 0.9865072

 $00:25:36.382 \longrightarrow 00:25:37.718$  Absolutely, and I think

NOTE Confidence: 0.95784825

 $00{:}25{:}37.720 \longrightarrow 00{:}25{:}39.953$  that you know, in the past clinical

NOTE Confidence: 0.95784825

00:25:39.953 --> 00:25:42.066 trials you though, Gee,

NOTE Confidence: 0.95784825

 $00:25:42.066 \longrightarrow 00:25:44.754$  I will try a clinical trial if everything

NOTE Confidence: 0.95784825

 $00:25:44.754 \longrightarrow 00:25:47.740$  else has failed and it's not working for me,

NOTE Confidence: 0.95784825

 $00:25:47.740 \longrightarrow 00:25:50.078$  so I'm going to try something experimental.

NOTE Confidence: 0.95784825

 $00:25:50.080 \longrightarrow 00:25:52.078$  Now that paradigm is completely shifted,

 $00:25:52.080 \longrightarrow 00:25:54.760$  so it may be that you have your

NOTE Confidence: 0.95784825

 $00{:}25{:}54.760 \dashrightarrow 00{:}25{:}56.275$  first treatment that you're

NOTE Confidence: 0.95784825

00:25:56.275 --> 00:25:58.210 going on a clinical trial.

NOTE Confidence: 0.95784825

 $00:25:58.210 \longrightarrow 00:26:00.466$  And it really is to try and

NOTE Confidence: 0.95784825

 $00:26:00.466 \longrightarrow 00:26:02.714$  better the outcomes for each of

NOTE Confidence: 0.95784825

 $00:26:02.714 \longrightarrow 00:26:04.729$  the recommended treatments

NOTE Confidence: 0.95784825

 $00:26:04.729 \longrightarrow 00:26:07.019$  that are recommended approaches,

NOTE Confidence: 0.95784825

 $00:26:07.020 \longrightarrow 00:26:09.318$  standard approaches so that we can

NOTE Confidence: 0.95784825

 $00:26:09.320 \longrightarrow 00:26:11.516$  push the envelope and

NOTE Confidence: 0.95784825

 $00:26:11.516 \longrightarrow 00:26:14.300$  really do the best for our patients.

NOTE Confidence: 0.8969215

 $00:26:15.600 \longrightarrow 00:26:18.365$  And in terms of these targeted therapies,

NOTE Confidence: 0.8969215

 $00:26:18.370 \longrightarrow 00:26:20.710$  whether it's a

NOTE Confidence: 0.8969215

00:26:20.710 --> 00:26:22.730 drug that's targeting an EGFR,

NOTE Confidence: 0.8969215

 $00{:}26{:}22.730 \to 00{:}26{:}25.502$  whether it's a drug targeting ALK or

NOTE Confidence: 0.8969215

00:26:25.502 --> 00:26:27.880 whatever, this is across the board.

NOTE Confidence: 0.8969215

 $00:26:27.880 \longrightarrow 00:26:29.860$  Is that right between small

 $00:26:29.860 \longrightarrow 00:26:31.840$  cell and non small cell?

NOTE Confidence: 0.8969215

 $00{:}26{:}31.840 \dashrightarrow 00{:}26{:}34.828$  And so the question that I have is if

NOTE Confidence: 0.8969215

 $00:26:34.828 \longrightarrow 00:26:37.574$  that is the case then for everyone

NOTE Confidence: 0.8969215

 $00:26:37.574 \longrightarrow 00:26:40.559$  who has lung cancer it sounds like

NOTE Confidence: 0.8969215

 $00:26:40.559 \longrightarrow 00:26:43.265$  they should have their tumor profiled

NOTE Confidence: 0.8969215

 $00:26:43.265 \longrightarrow 00:26:45.760$  with regards to all of these

NOTE Confidence: 0.8969215

 $00:26:45.760 \longrightarrow 00:26:48.178$  mutations so that their doctor can

NOTE Confidence: 0.8969215

 $00:26:48.178 \longrightarrow 00:26:50.562$  better inform what might be the

NOTE Confidence: 0.8969215

 $00{:}26{:}50.562 \rightarrow 00{:}26{:}52.650$  the rapy that works best for them.

NOTE Confidence: 0.8969215

 $00:26:52.650 \longrightarrow 00:26:53.802$  Is that right?

NOTE Confidence: 0.8969215

 $00:26:53.802 \longrightarrow 00:26:55.720$  So the the mutations that

NOTE Confidence: 0.9292635

 $00{:}26{:}55.720 \dashrightarrow 00{:}26{:}58.680$  I talked about EGFR and so forth are

NOTE Confidence: 0.9292635

 $00:26:58.680 \longrightarrow 00:27:01.850$  really much more common in non small cells.

NOTE Confidence: 0.9292635

 $00:27:01.850 \longrightarrow 00:27:04.860$  So we do as a matter of fact test all

NOTE Confidence: 0.9292635

 $00:27:04.947 \longrightarrow 00:27:07.509$  of our non small cell samples

 $00:27:07.509 \longrightarrow 00:27:10.551$  and look for

NOTE Confidence: 0.9292635

00:27:10.551 --> 00:27:13.335 these mutations. For small

NOTE Confidence: 0.9292635

 $00:27:13.340 \longrightarrow 00:27:15.626$  cell it's a little bit different.

NOTE Confidence: 0.9292635

 $00:27:15.630 \longrightarrow 00:27:19.760$  We don't have typically

NOTE Confidence: 0.9292635

00:27:19.760 --> 00:27:22.090 mutations in EGFR or ALK,

NOTE Confidence: 0.9292635

 $00:27:22.090 \longrightarrow 00:27:23.954$  specifically for small cell.

NOTE Confidence: 0.9292635

 $00{:}27{:}23.954 \dashrightarrow 00{:}27{:}26.248$  However, because we still think

NOTE Confidence: 0.9292635

 $00:27:26.248 \longrightarrow 00:27:28.990$  that it's important to test for

NOTE Confidence: 0.9292635

 $00{:}27{:}29.083 \dashrightarrow 00{:}27{:}31.879$  those and typically not up front,

NOTE Confidence: 0.9292635

00:27:31.880 --> 00:27:35.135 in other words, when you're first diagnosed,

NOTE Confidence: 0.9292635

 $00:27:35.140 \longrightarrow 00:27:37.930$  but if you are treated with

NOTE Confidence: 0.9292635

 $00:27:37.930 \longrightarrow 00:27:39.325$  chemo and immunotherapy,

NOTE Confidence: 0.9292635

 $00:27:39.330 \longrightarrow 00:27:42.264$  and perhaps it typically works very

NOTE Confidence: 0.9292635

 $00:27:42.264 \longrightarrow 00:27:46.492$  well in 80 to 90% of the cases

NOTE Confidence: 0.9292635

 $00:27:46.492 \longrightarrow 00:27:50.160$  you have a very good response

NOTE Confidence: 0.9292635

 $00:27:50.160 \longrightarrow 00:27:52.864$  but that disease may come back when

00:27:52.864 --> 00:27:55.467 you have stage four disease,

NOTE Confidence: 0.9292635

 $00:27:55.470 \longrightarrow 00:27:57.678$  it's typically not something that you're

NOTE Confidence: 0.9292635

 $00:27:57.678 \longrightarrow 00:28:00.085$  going to cure because you

NOTE Confidence: 0.9292635

00:28:00.085 --> 00:28:02.122 don't have the option of cutting out

NOTE Confidence: 0.9292635

 $00:28:02.182 \longrightarrow 00:28:04.317$  or radiating every microscopic cell.

NOTE Confidence: 0.9292635

 $00:28:04.320 \longrightarrow 00:28:06.090$  So if the disease regrows,

NOTE Confidence: 0.9292635

 $00:28:06.090 \longrightarrow 00:28:07.506$  if and when,

NOTE Confidence: 0.9292635

 $00:28:07.506 \longrightarrow 00:28:07.860$  unfortunately,

NOTE Confidence: 0.9292635

 $00:28:07.860 \longrightarrow 00:28:09.248$  the disease regrows,

NOTE Confidence: 0.9292635

 $00:28:09.248 \longrightarrow 00:28:11.733$  we want to have options and

NOTE Confidence: 0.9292635

00:28:11.733 --> 00:28:13.393 really develop more tools is

NOTE Confidence: 0.9292635

00:28:13.393 --> 00:28:16.277 what I tell my patients to be

NOTE Confidence: 0.9292635

00:28:16.277 --> 00:28:18.122 able to manage their disease,

NOTE Confidence: 0.9292635

 $00{:}28{:}18.130 \to 00{:}28{:}20.320$  and that's why we

NOTE Confidence: 0.9292635

 $00:28:20.320 \longrightarrow 00:28:22.872$  do work so much with clinical

 $00:28:22.872 \longrightarrow 00:28:25.442$  trials and feel that that's

NOTE Confidence: 0.9292635

 $00{:}28{:}25.442 \dashrightarrow 00{:}28{:}27.787$  incredibly important to be able to

NOTE Confidence: 0.9292635

 $00:28:27.787 \longrightarrow 00:28:29.837$  advance outcomes for our patients.

NOTE Confidence: 0.9292635

 $00:28:29.840 \longrightarrow 00:28:30.570$  Doctor Ann Chiang

NOTE Confidence: 0.93609256

 $00:28:30.570 \longrightarrow 00:28:33.083$  is an associate professor and medical

NOTE Confidence: 0.93609256

 $00{:}28{:}33.083 \dashrightarrow 00{:}28{:}35.687$  on cologist at the Yale School of Medicine.

NOTE Confidence: 0.93609256

 $00:28:35.690 \longrightarrow 00:28:37.274$  If you have questions,

NOTE Confidence: 0.93609256

 $00:28:37.274 \longrightarrow 00:28:39.254$  the address is cancer answers at

NOTE Confidence: 0.93609256

 $00{:}28{:}39.254 \dashrightarrow 00{:}28{:}41.440$  yale.edu and past editions of the

NOTE Confidence: 0.93609256

00:28:41.440 --> 00:28:43.574 program are available in audio and

NOTE Confidence: 0.93609256

 $00{:}28{:}43.574 \dashrightarrow 00{:}28{:}45.940$  written form at yale cancercenter.org.

NOTE Confidence: 0.93609256

 $00:28:45.940 \longrightarrow 00:28:48.883$  We hope you'll join us next week to learn

NOTE Confidence: 0.93609256

 $00:28:48.883 \longrightarrow 00:28:51.500$  more about the fight against cancer.

NOTE Confidence: 0.93609256

00:28:51.500 --> 00:28:53.480 Here on Connecticut public radio.

NOTE Confidence: 0.93609256

 $00:28:53.480 \longrightarrow 00:28:55.750$  Funding for Yale Cancer Answers

NOTE Confidence: 0.93609256

 $00{:}28{:}55.750 \dashrightarrow 00{:}28{:}58.020$  is provided by Smilow Cancer

 $00{:}28{:}58.102 \dashrightarrow 00{:}29{:}00.070$  Hospital and Astra Zeneca.
