NOTE duration:"00:01:32.2010000"

NOTE recognizability:0.837

NOTE language:en-us

NOTE Confidence: 0.8307359

00:00:10.100 --> 00:00:12.684 So the other question people often ask is

NOTE Confidence: 0.8307359

00:00:12.684 --> 00:00:15.337 what's the difference between the clinician

NOTE Confidence: 0.8307359

00:00:15.337 --> 00:00:17.757 scientists and the traditional track,

NOTE Confidence: 0.8307359

00:00:17.760 --> 00:00:20.630 and the similarities are that these are

NOTE Confidence: 0.8307359

00:00:20.630 --> 00:00:22.690 both research intensive tracks where

NOTE Confidence: 0.8307359

00:00:22.690 --> 00:00:25.014 your effort maybe 75%. In research.

NOTE Confidence: 0.8307359

00:00:25.014 --> 00:00:27.426 You're expected to build an excellent,

NOTE Confidence: 0.8307359

00:00:27.430 --> 00:00:29.174 nearly funded research program.

NOTE Confidence: 0.8307359

00:00:29.174 --> 00:00:32.591 You are expected to also be have excellence

NOTE Confidence: 0.8307359

00:00:32.591 --> 00:00:35.487 as a teacher and as a mentor for,

NOTE Confidence: 0.8307359

00:00:35.490 --> 00:00:38.322 especially for trainees in your research

NOTE Confidence: 0.8307359

00:00:38.322 --> 00:00:40.890 laboratories or your research programs.

NOTE Confidence: 0.8307359

00:00:40.890 --> 00:00:42.510 And both are required to have

NOTE Confidence: 0.8307359

00:00:42.510 --> 00:00:43.590 excellence in clinical practice.

NOTE Confidence: 0.8307359

00:00:43.590 --> 00:00:44.415 If your clinician,

NOTE Confidence: 0.8307359

00:00:44.415 --> 00:00:46.830 so I want to emphasize that that this is.

NOTE Confidence: 0.8307359

00:00:46.830 --> 00:00:48.300 But this is what the clinician

NOTE Confidence: 0.8307359

00:00:48.300 --> 00:00:49.800 scientists might have been considered.

NOTE Confidence: 0.8307359

00:00:49.800 --> 00:00:50.764 The old triple threat.

NOTE Confidence: 0.8307359

00:00:50.764 --> 00:00:52.210 The main difference is that that

NOTE Confidence: 0.8307359

00:00:52.261 --> 00:00:53.577 trajectory I mentioned before,

NOTE Confidence: 0.8307359

00:00:53.580 --> 00:00:55.260 where this is 10 years to tenure

NOTE Confidence: 0.8307359

00:00:55.260 --> 00:00:56.819 at the associate professor level.

NOTE Confidence: 0.8502053

00:00:57.610 --> 00:00:59.478 And that historically traditional

NOTE Confidence: 0.8502053

00:00:59.478 --> 00:01:01.346 track research tended to

NOTE Confidence: 0.8502053

00:01:01.350 --> 00:01:03.680 be more elaborate, laboratory or

NOTE Confidence: 0.8502053

00:01:03.680 --> 00:01:05.078 computationally based research,

NOTE Confidence: 0.8502053

00:01:05.080 --> 00:01:07.205 and clinician scientists track research

NOTE Confidence: 0.8502053

00:01:07.205 --> 00:01:09.931 was tended to be more translational

NOTE Confidence: 0.8502053

00:01:09.931 --> 00:01:12.546 or clinically oriented and but,

NOTE Confidence: 0.8502053

00:01:12.550 --> 00:01:15.334 but that's not always 100% true,

NOTE Confidence: 0.8502053

00:01:15.334 --> 00:01:17.998 and it really depends upon what

NOTE Confidence: 0.8502053

00:01:17.998 --> 00:01:20.489 type of research you're doing.

NOTE Confidence: 0.8502053

00:01:20.490 --> 00:01:22.294 And you're you're this.

NOTE Confidence: 0.8502053

00:01:22.294 --> 00:01:25.630 These kinds of discoveries you are making.
