Welcome to Pediatric Infectious Diseases & Global Health at the Yale University School of Medicine

We appreciate your interest in pediatric infectious diseases and our program. Our fellows receive diverse clinical and research training to prepare them for the many career paths available to a pediatric infectious disease physician. We will work with you to create a personalized training program with opportunities for experiential learning both here and abroad in antimicrobial stewardship, diagnostic microbiology, infection prevention, and research in areas such as public & global health, immunology, vaccinology, and microbial pathogenesis. In addition to mentors in the School of Medicine, our fellows have access to expert faculty across Yale University. Recent fellows have chosen mentors in the School of Public Health and the Immunobiology and Microbial Pathogenesis graduate programs. Exceptionally qualified applicants may also be eligible for advanced degrees.

While interviews remain virtual for 2022, as a section we have been excited to get back to safe in-person educational and social activities. New Haven offers excellent dining, museums, and outdoor activities with New York City just a short train ride away. We hope you consider applying to our program and look forward to sharing more details about how the section of Pediatric Infectious Diseases & Global Health can help you develop into a successful physician scholar. Please do not hesitate to reach out to me with questions.

Sincerely

Thomas S Murray MD PhD
Associate Professor, Yale School of Medicine
Department of Pediatrics, Infectious Diseases and Global Health
Department of Laboratory Medicine
Program Director, Pediatric Infectious Diseases and Global Health Fellowship
Associate Medical Director, Infection Prevention
Yale New Haven Children's Hospital
